Teleflex® to Show Enhanced Line of Pain Management Solutions at 38th Annual ASRA Regional Anesthesia and Acute Pain Medicine Meeting

April 30, 2013

LIMERICK, Pa.--(BUSINESS WIRE)--Apr. 30, 2013-- Teleflex Incorporated (NYSE: TFX), a leading global provider of medical devices for critical care and surgery, will encourage clinicians to "Count on Teleflex" with a showcase of its recently expanded pain management product portfolio at the 38th Annual Regional Anesthesiology and Acute Pain Medicine Meeting, May 2-4, 2013, in Boston, MA.

The Teleflex commitment to helping clinicians take control of patient pain, promoting faster recovery, and reducing length of stay is the core of the "Count on Teleflex: One Provider With Countless Solutions" campaign. The campaign highlights clinician-inspired products that help drive efficiencies, including:

- **AutoFuser® Disposable Pain Pumps** - Designed to provide a reliable and unimpeded method of delivering analgesic medication for continuous peripheral nerve block or site-specific applications. AutoFuser Pain Pumps offer a combination of continuous, hands-free infusion with an optional on-demand patient-controlled bolus to immediately address breakthrough pain.
- **Arrow® FlexBlock® Continuous Peripheral Nerve Block Catheters** - The FlexBlock Catheter's unique design offers a combination of ultrasound visibility, flexibility, and excellent kink resistance that is designed to provide clinicians with faster, more accurate catheter placement and a predictable spread of anesthetic.
- **Arrow® UltraQuik™ Peripheral Nerve Block Needles** - Designed to increase overall block success for clinicians who use ultrasound-guidance only when performing single-injection PNBs. UltraQuik Needles offer many of the same clinician-inspired features of Arrow® StimuQuik® ECHO Needles, including five grooved rings at the distal tip of the needle to help clinicians identify the needle tip under ultrasound.
- **Arrow® FlexTip Plus® Multi-Port Epidural Catheters** - Designed using the same proven technology of the FlexTip Plus® Open Tip, Single-Port catheter, which is shown to significantly reduce complications commonly associated with epidural catheters, such as vein cannulations and paresthesia.[1-2] With the addition of the closed tip, multi-port catheter, the FlexTip Plus Product Portfolio now provides a complete offering that can meet the physician's preferred analgesic dispersion method.

"At Teleflex we are committed to providing solutions to the field of regional anesthesia and acute pain management that help physicians take control of their patient's pain," said Cary Vance, President, Anesthesia & Respiratory Division of Teleflex. "This campaign will continue our tradition of partnering with the pain management physician community to be the provider with a complete offering of solutions that deliver innovation designed to promote faster recovery and reduced lengths of stay for their patients."
