Antibe Therapeutics Inc. (T.ATE - TSX)

T.ATE: Preparing for Potential Uplisting to Nasdaq…

Based on our probability adjusted DCF model that takes into account potential future revenues from otenaproxesul, ATE.V is valued at CAD$28.00 per share. This model is highly dependent upon continued clinical success of otenaproxesul and will be adjusted accordingly based upon future clinical results and the company's execution.

Current Price (12/07/2020)	CAD$3.85
Valuation	**CAD$28.00**

OUTLOOK

Antibe Therapeutics Inc. (ATE.T) is developing safer medicines for pain and inflammation utilizing the company's proprietary hydrogen-sulfide releasing technology. Antibe recently announced positive topline results for the Phase 2b dose-ranging efficacy study of the company's lead development compound, ATB-346 (otenaproxesul) in patients with osteoarthritis. Near-term milestones include filing an IND for otenaproxesul before the end of 2020, meeting with the FDA for an 'End-of-Phase 2' within the next six months, and initiating a pivotal Phase 2/3 adaptive design trial late in the first quarter or early in the second quarter of 2021.

WHAT'S NEW

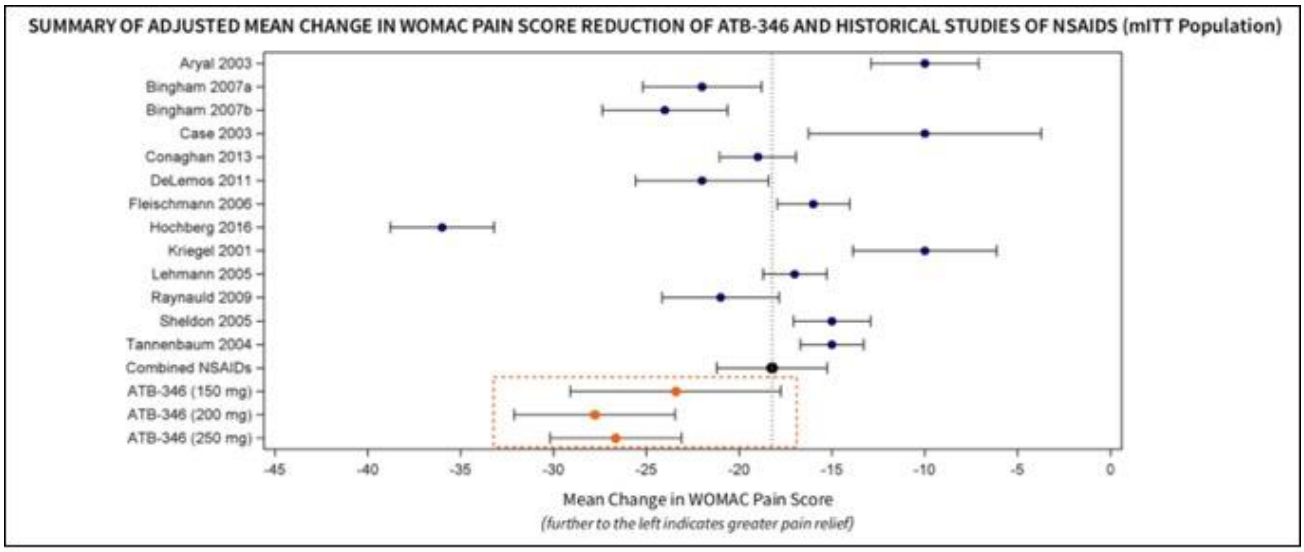
Business Update

Update on Otenaproxesul

Antibe Therapeutics, Inc. (ATE.V) is preparing to move its lead development compound, otenaproxesul (the nonproprietary name for ATB-346), into a Phase 3 program. Otenaproxesul is being developed as a solution to the dose-related gastrointestinal (GI) side effects associated with nonsteroidal anti-inflammatory drugs (NSAIDs). It uses naproxen as a base molecule with a hydrogen sulfide moiety covalently attached. Hydrogen sulfide (H_2S) is an important gasotransmitter, a gas that serves an important signaling molecule in the body.

In June 2020, Antibe announced positive topline results from the Phase 2b dose-ranging, efficacy trial of otenaproxesul. The randomized, double blind, placebo controlled trial enrolled 385 patients with osteoarthritis (OA) of the knee to once daily placebo or one of the three doses of otenaproxesul: 250 mg, 200 mg, and 150 mg. The primary endpoint of the trial was the change from baseline in the WOMAC pain subscale score following 14 days of treatment. Secondary efficacy endpoints included the WOMAC stiffness subscale score and the WOMAC difficulty performing daily activities (DPDA) subscale score.

Patients administered otenaproxesul showed a statistically significantly greater decrease in the change in the WOMAC pain subscale score compared to those administered placebo at both 250 mg (*P*=0.01) and 200 mg (*P*=0.007). The 150 mg cohort was not powered for statistical significance, however that dose showed robust efficacy in the primary endpoint and likely would have been statistically significant if it had been adequately powered like the other treatment arms. The full results are discussed in detail in our previous report. The adverse event profile was similar between placebo and all three doses of ATB-346, and consisted of events typically seen with the use of NSAIDs (e.g., dyspepsia, acid reflux, and dizziness). The following image summarizes how the results seen for otenaproxesul compare to NSAIDs evaluated in other clinical trials, with further to the left indicating greater pain relief.



Source: Antibe Therapeutics, Inc.

In 2018, Antibe announced positive topline results for the Phase 2 GI safety study of otenaproxesul. The double-blind, study enrolled 244 healthy volunteers, in which participants were administered either 250 mg otenaproxesul once daily or 500 mg naproxen twice daily. All subjects had an endoscopic examination of the upper GI tract prior to drug treatment and at the end of the 14-day study period.

The results showed that 42.1% (53/126) of naproxen-dosed subjects had GI ulceration compared to only 2.5% (3/118) of subjects treated with otenaproxesul, which was a statistically significant difference (*P*<0.001). Importantly, there were no safety signals and transient increases in liver enzymes were seen at levels comparable to what is seen with the most commonly prescribed NSAIDs.

The company has begun planning the Phase 3 development program for otenaproxesul. We anticipate an IND being filed in the next few months and an 'End-of-Phase 2' meeting occurring with the FDA (and the equivalent meeting with the EMA) within the next six months such that the first Phase 3 efficacy clinical trial can initiate by the end of the second quarter of 2021. While we await word on the specific details of the Phase 3 program, we believe it will involve:

- Two 12-week efficacy trials that will include lower doses of otenaproxesul than were seen in the Phase 2b dose-ranging efficacy trial (tested against placebo) such that the lowest effective dose can be determined. The first of those trials is likely to be a Phase 2/3 adaptive design trial, whereby an interim analysis is conducted following 50% enrollment to ensure that an adequate number of patients are enrolled to achieve statistical significance. The second efficacy trial will likely commence following the interim analysis of the first trial.

- One or two six-month GI-safety trials will be conducted so that the company can obtain a label for otenaproxesul that does not include the 'black box' warning regarding GI toxicity that is found on the labels for all NSAIDs.

- Safety data out to one year that will likely be collected from an open-label extension trial of the efficacy studies.

The company has initiated Phase 3-enabling animal toxicity and reproductive toxicity studies in rats, pigs, and rabbits. The short-range studies are expected to be completed by the first quarter of calendar 2021 such that the 12-week dosing portion of the Phase 3 trial can initiate while the long-range studies are expected to conclude in the third quarter of calendar 2021 such that the 24-week Phase 3 GI safety studies can commence.

We anticipate partnering discussions with potential global and regional partners to accelerate now that the Phase 2 trials are completed. Antibe will be actively advancing toward initiation of a Phase 3 trial while simultaneously engaging with potential partners. While we continue to believe a partnership with a major, global pharmaceutical company is likely, we are unsure of the timing for such an agreement knowing that these arrangements can take a considerable amount of time to pull together.

Financial Update

On November 13, 2020, Antibe announced financial results for the second quarter of fiscal year 2021 that ended September 30, 2020. The company reported revenues of CAD$2.9 million for the three months ending Septeber 30, 2020 compared to revenues of CAD$2.2 million for the three months ending September 30, 2019.

General and administrative, selling and marketing, research and development, stock-based compensation, and amortization and depreciation totaled CAD$8.8 million for the second quarter of fiscal year 2021 compared to CAD$3.1 million for the first quarter of fiscal year 2020. The increase was primarily related to the following:

- G&A expenses were CAD$2.5 million in 2QFY21 compared to CAD$1.2 million in 2QFY20. The increase was primarily due to higher salaries and wages, professional and consulting fees, and office expenses.
- Selling and marketing costs were CAD$0.6 million in 2QFY21 compared to CAD$0.8 million in 2QFY20. The decrease was due to lower salaries and wages, commissions, travel, and entertainment costs.
- R&D expenses were CAD$4.8 million in 2QFY21 compared to CAD$2.4 million in 2QFY20. The increase was primarily due to higher development costs for otenaproxesul, pill manufacturing costs, and salaries and wages.
- Stock-based compensation in 2QFY21 was CAD$0.8 million compared to CAD$1.0 million in 2QFY20 due to expensing of previously granted RSUs.
- Amortization and depreciation was CAD$0.1 million in both 2QFY21 and 2QFY20.

As of September 30, 2020, Antibe reported cash and cash equivalents of approximately CAD$22.4 million. The company recently began trading on the Toronto Stock Exchange (TSX) and also conducted a 1:10 share consolidation in preparation for an eventual uplisting to the Nasdaq. There are approximately 38.8 million shares outstanding and, when factoring in stock options and warrants, the fully diluted count is approximately 46.4 million. Lastly, the company will be expanding its investor outreach in the coming months to include institutional investors in an effort to expand its shareholder base.

Conclusion

Antibe continues to execute on its strategy as it moves otenaproxesul toward initiation of a global Phase 3 program. We anticipate an IND filing and an 'End of Phase 2' meeting to occur during the first half of 2021 such that the first Phase 3 clinical trial can initiate by the end of the second quarter of 2021, with subsequent trials initiating over the subsequent months. We are looking forward to continued updates as the company meets with regulatory authorities in preparation for the Phase 3 program. We have adjusted our model to account for the recent 1:10 share consolidation and our valuation is CAD$28.00 per share.

DISCLOSURES

The following disclosures relate to relationships between Zacks Small-Cap Research ("Zacks SCR"), a division of Zacks Investment Research ("ZIR"), and the issuers covered by the Zacks SCR Analysts in the Small-Cap Universe.

ANALYST DISCLOSURES

I, David Bautz, PhD, hereby certify that the view expressed in this research report accurately reflect my personal views about the subject securities and issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the recommendations or views expressed in this research report. I believe the information used for the creation of this report has been obtained from sources I considered to be reliable, but I can neither guarantee nor represent the completeness or accuracy of the information herewith. Such information and the opinions expressed are subject to change without notice.

INVESTMENT BANKING AND FEES FOR SERVICES

Zacks SCR does not provide investment banking services nor has it received compensation for investment banking services from the issuers of the securities covered in this report or article.
Zacks SCR has received compensation from the issuer directly, from an investment manager, or from an investor relations consulting firm engaged by the issuer for providing non-investment banking services to this issuer and expects to receive additional compensation for such non-investment banking services provided to this issuer. The non-investment banking services provided to the issuer includes the preparation of this report, investor relations services, investment software, financial database analysis, organization of non-deal road shows, and attendance fees for conferences sponsored or co-sponsored by Zacks SCR. The fees for these services vary on a per-client basis and are subject to the number and types of services contracted. Fees typically range between ten thousand and fifty thousand dollars per annum. Details of fees paid by this issuer are available upon request.

POLICY DISCLOSURES

This report provides an objective valuation of the issuer today and expected valuations of the issuer at various future dates based on applying standard investment valuation methodologies to the revenue and EPS forecasts made by the SCR Analyst of the issuer's business.
SCR Analysts are restricted from holding or trading securities in the issuers that they cover. ZIR and Zacks SCR do not make a market in any security followed by SCR nor do they act as dealers in these securities. Each Zacks SCR Analyst has full discretion over the valuation of the issuer included in this report based on his or her own due diligence. SCR Analysts are paid based on the number of companies they cover. SCR Analyst compensation is not, was not, nor will be, directly or indirectly, related to the specific valuations or views expressed in any report or article.

ADDITIONAL INFORMATION

Additional information is available upon request. Zacks SCR reports and articles are based on data obtained from sources that it believes to be reliable, but are not guaranteed to be accurate nor do they purport to be complete. Because of individual financial or investment objectives and/or financial circumstances, this report or article should not be construed as advice designed to meet the particular investment needs of any investor. Investing involves risk. Any opinions expressed by Zacks SCR Analysts are subject to change without notice. Reports or articles or tweets are not to be construed as an offer or solicitation of an offer to buy or sell the securities herein mentioned.

CANADIAN COVERAGE

This research report is a product of Zacks SCR and prepared by a research analyst who is employed by or is a consultant to Zacks SCR. The research analyst preparing the research report is a resident outside of Canada and is not an associated person of any Canadian registered adviser and/or dealer and, therefore, the analyst is not subject to supervision by a Canadian registered adviser and/or dealer, and is not required to satisfy the regulatory licensing requirements of any Canadian provincial securities regulators, the Investment Industry Regulatory Organization of Canada and is not required to otherwise comply with Canadian rules or regulations.
