NN Inc. (NNBR-NASDAQ)

NNBR: The company released 2nd quarter 2023 results which showed a difficult demand environment but improved core profitability and free cash flow generation.

Utilizing a DCF valuation process containing conservative estimates combined with other valuation methodologies, we believe NNBR could be worth $5.00 per share. A negative economic environment may lower this value.

Current Price (08/4/23)	$2.75
Valuation	**$5.00**

OUTLOOK

NN Inc. is a diversified industrial company that combines in-depth materials science expertise with advanced engineering and production capabilities to design and manufacture high-precision metal and plastic components and assemblies for a variety of end markets on a global basis. The company is targeting the electric vehicle and electric grid industries which should grow at above average growth rates. In 2021, the company underwent a series of financial transactions in order to transition to a longer-term capital structure which would provide flexibility and financial stability for its growth plans. The company is expected to return to positive free cash flow in 2023.

WHAT'S NEW

Financial Review

NN Inc. (NASDAQ:NNBR) reported 2nd quarter 2023 financial results on August 3rd, 2023 which showed improved profitability and free cash flow generation. However, sales growth was relatively flat compared to the prior year period.

Total sales were essentially flat in the 2nd quarter at $125.2 million primarily due to reduced volumes and unfavorable foreign exchange effects which was partially offset by higher customer pricing.

Price increases contributed $9.0 million and were offset by $7.0 million in volume declines. Operating loss was ($4.0) million and adjusted operating income loss was $1.3 million, an improvement from adjusted operating income of $0.1 million the 2nd quarter of 2022 and an adjusted operating loss of $0.35 million in the 1st quarter of 2023. The Non-GAAP operating income eliminates amortization expense and one-time unusual items. Adjusted EBITDA was $10.5 million. Free cash flow generated in the quarter was $3.0 million.

In the 2nd quarter, sales in the Power Solution segment decreased 7.7% to $48.1 million compared to the prior year, primarily due to slower residential and commercial construction markets and customer inventory reductions. The company also closed two unprofitable plants, Irvine and Tauton. Adjusted operating income was $5.6 million compared to adjusted operating income of $4.6 million in the 2nd quarter of 2022. The increase was primarily due to the facility closure savings and was partially offset by lower volumes. Adjusted EBITDA increased to $6.5 million.

In the Mobile Solutions segment, net sales for the 2nd quarter of 2023 were $77.2 million, an increase of 5.2% compared to the 2nd quarter of 2022. The increase was primarily due to higher customer pricing actions, partially offset by lower volumes and unfavorable foreign exchange effects. Adjusted operating income was $0.2 million compared to adjusted operating income of $2.6 million in the prior year period. The decrease in adjusted operating income was primarily driven by volume reductions and a favorable customer settlement in the prior year. Adjusted EBITDA was $7.5 million. The company noted improved operations in the China JV. Demand for Mobile Solutions end markets should be steady in the 2nd half of 2023, however demand growth is not expected given the macro environment and commentary made by other competitors and customers.

Global liquidity remains strong at $44.0 million, which is comprised of $14.3 million in cash and $29.7 million in availability under its credit line. The company indicated the potential preferred equity raise is no longer under consideration. Working capital was $106.4 million. The company's leverage ratio increased slightly to 3.87x but is expected to trend down going forward if the company continues to generate free cash flow.

New CEO Harold Bevis stated, *"Our team has embraced the need for meaningful change and is taking aggressive action to transform the company. Multiple transformation initiatives are underway and are being led by an experienced NN team which has been supplemented by additional talent. The goal is to improve performance faster in both the short-term and long-term. Over the second half of 2023 we are focused on the following:*

1) delivering higher rates of new business wins by leveraging existing open capacity and targeted new capacity;
2) containing and eliminating operating losses at a few select plants and within certain customer agreements;
3) installing an evergreen cost productivity and margin expansion regimen; and, lastly
4) investing into the business and delivering net free cash flow."

Transformation Initiatives

Incoming CEO Harold Bevis has outlined a transformation plan that increases the entire organization's commitment to boost sales, operating profit and free cash flow. These include hiring new executives and personnel as well as flattening the organizational charge to expand the number of direct reports to the CEO. This includes a Chief Procurement Officer, a soon to be announced Chief Operating Officer, and other certain specialists. New executives include those who have transformed companies as well as those who have worked with Mr. Bevis before at prior roles. The funding for these new personnel additions will be achieved through other cost reduction initiatives.

The company plans to increase its focus on cost reduction and plans to implement a steady-state cost productivity regiment. This involves moving certain manufacturing footprints to low-cost countries as well as minimize skill redundancies at the company. Also included is an increased focus on unprofitable parts of the company, both plants and customer contracts. This alone could improve profitability by over $10 million on an annual basis. The company also plans to increase its focus on free cash flow generation by proactively managing account receivables, accounts payables, inventory and capital spending. The company also plans to significantly increase new business wins through a holistic approach utilizing sales, marketing and engineering resources. In the first half of 2023, electric power steering components for electric vehicles have become the largest component of new business wins. The company plans to expand product concentration in key profitable areas such as electronic power steering for electric vehicles, connector, shielding, and braking system components.

Business and Market Updates

The slowdown in residential and commercial construction in 2023 has affected near-term operating results for the company. However, the long-term outlook for the Power Solutions segment remains strong as residential and commercial construction is expected to grow by the end of 2023 or early 2024. Demand for electric control panels and solar related equipment is expected to regain its strong growth trends in 2023 from end customers that are involved in upgrading the national electric grid. The global market size for grid battery electric storage is also expected to be a strong growth driver and is estimated to reach $6.6 billion in value by 2030. The direct addressable market opportunity for NN is estimated to be in the range of $300 to $500 million by 2030.

Commercial, private, and industrial sectors are expected to yield the highest demand for battery energy storage systems. The rising penetration of lithium-ion batteries will also create growth opportunities. In addition, expansion of infrastructure projects, along with the growth in the transportation sector, will encourage leading companies to tap into those markets. Around the world, many countries are driving progress in grid interconnection gaps, clearing the way for source to load across wide geographies.

The outlook for Mobile Solutions segment is turning positive with light vehicle production forecasted to improve throughout 2023 which reflects recovering markets in China and South Asia. This forecast was somewhat tempered by ongoing supply chain issues and Covid-19 issues in early 2023. Production of global light vehicles is expected to increase approximately 5.0% in 2023. Zero Emission and Hybrid vehicles are expected to take a larger share of vehicle production in coming years.

The company's sales pipeline is developing as planned with business development teams focusing on key target markets with the expansion of products into the Electric Vehicle (EV) and Electric Grid markets remaining a priority. Another positive sign is the company's average deal size is increasing in value which can be attributed to high volume sales activity in Grid Storage and EV battery systems.

The company has been proactive in taking pricing initiatives in many areas of its business. The company has secured full material pass-through pricing on substantially all Mobile Solutions customers. In addition, discussions are ongoing with a focus on eliminating the negative pass-through lag that often occurs in an inflationary environment. New customer contracts are also being structured to provide additional inflation protection. The benefits of these pricing actions are expected to be fully realized in 2023.

NN has implemented a series of cost reduction initiatives which primarily focus on closing certain aerospace, defense and medical facilities. Facilities in Taunton, Massachusetts and Irvine, California were closed in the 1st half of 2023 which combined had annual operating losses of approximately $10 million. Three additional facilities are expected to be closed in the Mobile Solutions segment which may bring $3.9 million in benefits through cost savings and EBITDA improvement.

Loan Amendment

On March 3rd, 2023, the company amended its ABL and term loan to create additional flexibility to manage its business operations through an uncertain economic environment. The amendments increase maximum total leverage ratio covenants for the duration of the term loan beginning in 2023 which starts at 4.50x currently and drops to 3.00x in 2025. In addition, the existing cap on customer receivable financing programs has been increased from $20 million to $30 million. The amendments also introduced a quarterly domestic liquidity covenant which is a $20 million minimum. Interest under the term loan amendment is increased on a paid-in-kind basis at a rate dependent on the outstanding leverage ratio at period end or whether the company completes a qualifying preferred equity raise by June 30, 2023. The company also issued penny warrants to satisfy the lender fee associated with the term loan amendment.

Management Transition

A new CEO hire was announced on May 9th with an effective start date of May 22nd. Harold Bevis has more than 25 years of business leadership experience, including more than 20 years' experience in the CEO role at various companies. He was previously President and CEO of Commercial Vehicle Group, Inc. (NASDAQ: CVGI), a publicly traded manufacturer of electrical, mechanical and seating systems for electric and internal combustion engine commercial vehicles, as well as industrial automation and robotic systems to retailers and ecommerce shippers. At CVGI, Mr. Bevis demonstrated a track record of driving automation and connectivity. Prior to his experience at CVGI, Mr. Bevis was Chairman and CEO of Boxlight, a startup company focused on education technology solutions. Previously, Mr. Bevis led a number of companies in the packaging industry, including as President and CEO of Xerium Technologies, Inc., Chairman and CEO of Prolamina, and President and CEO of Pliant Corporation. Mr. Bevis has a bachelor's degree in industrial engineering from Iowa State University, and an MBA in marketing from Columbia Business School.

2023 Outlook

The company updated its 2023 outlook which calls for total revenues in the range of $485-$505 million and adjusted EBITDA in the range of $40-$46 million. Free cash flow is expected to be positive and be between $7 and $13 million. The free cash flow guidance does not include the CARES Act tax refund of approximately $11 million due to uncertain timing on when that may be received.

The company mentioned that there are approximately $10 million in potential cost savings from underperforming plants and customer contracts. This equates to approximately $70-$80 million in revenues that are operating at a loss and that are expected to be recaptured at a profitable level in the future. The company also indicated it plans to slowly reenter the medical markets as its non-compete expires which was part of previously divested business.

Valuation & Estimate Changes

We are adjusting our EPS estimates slightly for 2023 to account for a difficult 1st half. We lower our 2023 revenue estimates to approximately $498 million and our 2023 adjusted EPS estimate is now ($0.34). Our adjusted EBITDA estimate is approximately $43.0 million, which is the mid-point of the company's guidance.

We are maintaining our DCF derived valuation target of **$5.00**. In addition, the stock is below book value per share. We estimate NNBR stock is selling at approximately 82.0% of book value.

The markets that NN is focusing on are expected to produce above average growth rates. According to an IHS Market study, products used to expand and modernize the electric grid are expected to grow at an average annual rate of between 6%-10% from 2022 to 2027. The next generation mobility market, which are components used in the manufacturing of electric vehicles, is also a high-growth market. Electric vehicle production is expected to grow at an average annualized rate of between 16%-20% between 2023 and 2028.

We do not believe the recent operating environment reflects the true earnings power of NN going forward. The company's primary focus on growing end markets such as electric vehicles and electric grid upgrades should provide growth tailwinds for the foreseeable future. The company is already seeing results from recent sales efforts where there has been a significant pipeline expansion in these target growth markets. The company has a focused plan for cost reduction and margin improvement that should start to take hold in 2023 and 2024.. As inflationary and other cost pressures recede, NN should be able to produce strong double-digit cash flow growth.

KEY INVESTMENT POINTS

Source: nninc.com

- Founded in 1980, NN Inc. (NNBR) has grown from a single ball and roller factory into a global diversified manufacturer with over $500 million in revenues (estimated) and advanced engineering and technology capabilities.

- The company combines in-depth materials science expertise with advanced engineering and production capabilities to design and manufacture high-precision metal and plastic components and assemblies for a variety of customers on a global basis.

- The company recently underwent a turnaround and restructuring efforts which include the divestiture of a major business segment, the reduction of debt, and other recapitalization efforts. These efforts should improve the overall viability of the company and transition to a longer-term capital structure which would provide flexibility and financial stability for growth.

- The company has a defined growth strategy to take advantage of global trends associated with the shift from Internal Combustion Engine vehicles to Electric Vehicles as well as the modernization of the electric grid to accommodate the inevitable transition to EVs.

- The company has evolved from a traditional contract manufacturer into a high-tech partner in numerous technologies that provide relevant dynamic growth opportunities to its customers.

- NN has an experienced management team and a reconstituted Board of Directors that possess vast industry expertise relevant to the company's overall long-term growth strategies.

- The company went public in 1994 and currently has a market capitalization of $125.5 million. The leverage ratio as of the 6/30/23 was 3.87x, however based on 2024 EBITDA estimates, the leverage ratio is expected to decline on a forward-looking basis.

- We believe NNBR stock is worth **$5.00** based on a discounted cash flow (DCF) calculation and a peer multiple comparison using EV/EBITDA. In addition, the stock is selling below book value per share.

NN's innovative solutions can be found all around you, from your home to your car to your workplace.

Source: nninc.com

OVERVIEW

Source: nninc.com

NN, Inc. is a diversified industrial company that combines complex materials science expertise with advanced engineering and production capabilities to design and manufacture high-precision metal and plastic components and assemblies for a variety of customers on a global basis. The company has evolved from a traditional contract manufacturer to an advanced technology focused partner with its customers.

The company operates under two distinct segments that represent a variety of products and end customers. Mobile Solutions is focused on growth in the automotive and general industrial end markets. The company has developed an expertise in manufacturing highly complex, tight tolerance, system critical components. This segment currently manufactures components on a high-volume basis for use in vehicle power steering, braking, transmissions, and gasoline fuel system applications. In addition, manufactured components include use in heating, ventilation, and air conditioning systems as well as diesel injection and diesel emissions treatment applications.

Power Solutions is focused on growth in the electrical, general industrial, automotive, aerospace and defense markets. Within this group the company combines materials science expertise with advanced engineering and production capabilities to design and manufacture a broad range of high-precision metal and plastic components, assemblies, and finished devices used in applications ranging from power control to flight control and for military devices.

In addition, under the Power Solutions segment, the company manufactures a variety of products including electrical contacts, connectors, contact assemblies, and precision stampings for the electrical end market. The company also produces high precision products for the aerospace and defense end market utilizing extensive process technologies for optical grade plastics, thermally conductive plastics, titanium, Inconel, magnesium, and electroplating.

The company is making a concerted effort to focus on sustainable growth markets, particularly in the areas of electric vehicle components and products related to upgrading the electric grid. According to a report by Emergen Research, the 5-year compound annual growth rate for electric vehicles is expected to be in the range of 16%-20% range and reach an addressable market of over $4 billion. The industry associated with the upgrade of the national electric grid infrastructure is expected to grow at an annual rate of between 6%-10% and reach an addressable market of over $1 billion.

NN has a strategically placed global footprint with 69% of its manufacturing capacity located in North America, 13% in the Asia/Pacific region, and 9% in both Europe and South America. Approximately 75% of revenues are derived from North America, 12% from the Asia/Pacific region, and roughly 7% from both Europe and South America.

After a series of multiple acquisitions over the 2015-2018 time frame which were mostly financed by debt, the company realized that its overleveraged capital structure was hindering potential investment and growth opportunities. In 2020, the company sold its Life Sciences business for approximately $743 million in net proceeds. This medical related segment produced a variety of tools and instruments for the orthopedics and surgical end markets. The proceeds from this divestiture were used to repay approximately $710 million in net debt which significantly reduced leverage ratios which had been in excess of 6x prior to the sale.

COMPETITIVE ADVANTAGES

NN possesses comprehensive and industry leading high-precision manufacturing capabilities and has the ability to produce high-precision parts in large production volumes. The core technology platform consists of advanced precision machining, progressive stamping, injection molding, laser welding, material science, assembly, and design optimization. Products are manufactured to application-specific customer design and co-design standards that are developed for a specific use. The high-precision capabilities are part of a zero-defect design process which seeks to eliminate variability and manufacturing defects throughout the entire product. The company has the manufacturing capability to create tolerances down to the 1-micron level. For comparison, the width of a human hair is about 88 microns. The company has differentiated themselves among competitors by providing customer engineered solutions and a broad reach and breadth of manufacturing capabilities.

The tight-tolerance and high-quality nature of the company's precision products is specifically suited for use in high demanding applications that require exceptional reliability. The company's products are critical components to the operation and reliability of larger mechanical systems utilized by customers. These types of precision parts are difficult to manufacture and achieve premium pricing in the marketplace as the high cost of failure causes customers to focus on quality. Parts are developed for specific uses within customer critical systems and are typically designed in conjunction with the system designer.

The company's engineering expertise and thorough knowledge of the precision manufacturing processes adds proprietary value throughout the complete lifecycle of the products in conjunction with the customer. The relationship with the customer begins early in the conceptual design process where the company can offer valuable feedback on potential cost, manufacturability, and estimated reliability of the parts. Part designs are then prototyped, tested, and qualified in coordination with the customer design process before going to full-scale production. This close working relationship with customers early in the product lifecycle helps to secure business and increase industry knowledge. Lastly, product performance verification, product troubleshooting, and post-production engineering services further enhance the customer relationship.

NN maintains relationships with hundreds of customers around the world who are typically sophisticated, engineering-driven, mechanical systems manufacturers with long histories of product development and reputations for quality. Customers include well-known companies such as Bosch, Honeywell, Siemens, Itron, Denso, Raytheon, BorgWarner, Parker, and Eaton. The company has no material retail exposure which limits volatility and provides enhanced sales visibility. Relationships with the company's top ten revenue generating customers average more than ten years.

The company continues to realize benefits and synergistic effects between the Mobile Solutions and Power Solutions segments by sharing experienced engineering resources and wide-ranging portfolio of process technologies from each business to serve customers' changing needs. Recent solutions developed in the electric grid, electric vehicle, aerospace, defense, and general industrial markets leveraged the experience and expertise from each business to respond to increasingly tight and stringent customer requirements.

Electric motor shafts

Source: NN Investor Presentation

RISKS

- NN depends on a relatively limited number of customers and the loss of any major customer would have a material adverse effect on the business. Revenues from their ten largest customers accounted for approximately 43% of consolidated net sales. The loss of all or a substantial portion of sales to these customers would result in the company losing a substantial portion of total revenues and would lower operating margins and cash flows from operations.

- Work stoppages or similar difficulties and unanticipated business disruptions could significantly disrupt manufacturing operations, reduce company revenues and materially affect earnings. A work stoppage at one or more facilities could have a material adverse effect on the company's business, prospects, financial condition, operating results, and free cash flows. Also, if end-market customers were to experience a work stoppage, that customer would likely halt or limit purchases of company products.

- The company's markets are highly competitive, and many competitors have significant financial advantages that could adversely affect business operations. The company faces substantial competition in the sale of components, system subassemblies, and finished devices in the vertical end markets into which they sell products.

- Competitors are continuously exploring and implementing improvements in technology and manufacturing processes in order to improve product quality, and their ability to remain competitive will depend on whether NN is able to keep pace with such quality improvements in a cost-effective manner. Further, the company's customers' internal manufacturing capabilities are a significant competitor in which they may choose to manufacture products internally as opposed to outsourced providers.

- The company's debt levels could adversely affect the overall business, prospects, financial condition, results of operations, and cash flows. As of March 31, 2023, the company had approximately $158.3 million of funded indebtedness outstanding.

- Total debt obligations could have important consequences, including increasing vulnerability to adverse economic or competitive developments, requiring a substantial portion of operating cash flows from operations to be dedicated to debt obligations. In addition, certain debt agreements contain restrictions that will limit flexibility in business operations such as covenants that limit the ability to engage in certain types of transactions.

- The company has international operations that are subject to foreign economic uncertainties and foreign currency fluctuations. Approximately 39% of total revenues are denominated in foreign currencies, which may result in additional risk of fluctuating currency values and exchange rates and controls on currency exchange. Any increased costs or reduced revenues as a result of foreign currency fluctuations could affect profits. The company also has material specific country risk exposure to China with its 49.0% investment in Wuxi Weifu Autocam Precision Machinery Company, Ltd.

MANAGEMENT

Harold Bevis
Chief Executive Officer

Mr. Bevis has more than 25 years of business leadership experience, including more than 20 years' experience in the CEO role at various companies. He was previously President and CEO of Commercial Vehicle Group, Inc. (NASDAQ: CVGI), a publicly traded manufacturer of electrical, mechanical and seating systems for electric and internal combustion engine commercial vehicles, as well as industrial automation and robotic systems to retailers and ecommerce shippers. At CVGI, Mr. Bevis demonstrated a track record of driving automation and connectivity. Prior to his experience at CVGI, Mr. Bevis was Chairman and CEO of Boxlight, a startup company focused on education technology solutions. Previously, Mr. Bevis led a number of companies in the packaging industry, including as President and CEO of Xerium Technologies, Inc., Chairman and CEO of Prolamina, and President and CEO of Pliant Corporation. Mr. Bevis has a bachelor's degree in industrial engineering from Iowa State University, and an MBA in marketing from Columbia Business School.

Michael Felcher
Senior Vice President and Chief Financial Officer

Mike Felcher was appointed Senior Vice President and Chief Financial Officer in July 2021, after having served as Vice President and Chief Accounting Officer since June 2018. Prior to joining NN, he served as the Vice President, North America Chief Financial Officer for JELD-WEN, Inc. Before assuming his role at JELD-WEN, Inc., Felcher served in finance roles of increasing responsibility with United Technologies Corporation's Aerospace Systems Division, and its predecessor, Goodrich Corporation. He began his career at PricewaterhouseCoopers and is a licensed CPA. He holds a Bachelor of Science, Accountancy from Bentley University and a Master of Business Administration from Wake Forest University.

Matthew Heiter
Senior Vice President, General Counsel and Secretary

Matt Heiter joined NN in July 2015 as Senior Vice President and General Counsel. Prior to joining NN, he was a shareholder in the law firm of Baker, Donelson, Bearman, Caldwell and Berkowitz, P.C., where he served as chair of the firm's Securities Practice Group. Heiter is a graduate of Vanderbilt Law School and has earned numerous honors while in private practice, including being listed in Best Lawyers in America and Chambers USA

Andrew Wall
Senior Vice President and Chief Commercial Officer

Andrew Wall joined NN in January 2022 as Senior Vice President and Chief Commercial Officer. Prior to joining NN, he held numerous marketing and sales, strategy, general management, and factory and field service operations roles with ABB, Ltd., a publicly held, global manufacturer of heavy electrical equipment and automation technology. Most recently, Wall served as Vice President, Product Marketing and Sales, Electrification U.S. He serves on the Board of Directors for Research Triangle Cleantech Cluster, an industry-funded, industry-led initiative focused on accelerating cleantech innovation and the cleantech economy of North Carolina. Wall holds a Bachelor of Science, Business Management from North Carolina State University and a Master of Business Administration from Elon University.

Gail Nixon
Senior Vice President and Chief Human Resources Officer

Gail Nixon joined NN in 2007 and was appointed Senior Vice President and Chief Human Resources Officer in 2018. She previously served as Vice President of Human Resources and has held multiple HR leadership roles within the company. Nixon began her career in the non-profit sector, and from 2000-2007, she held various accounting and human resources positions with a multi-state healthcare organization, ultimately serving as its corporate human resources director. Nixon is a member of the Society for Human Resource Management and has earned her Senior Professional in Human Resources and SHRM-Senior Certified Professional designations.

KEY PRODUCTS

- **Precision Worm Shafts (Steering Worms)**
  - Application: automotive/electric power steering
  - Competitive Advantage: Turning, milling, griding (some are heat treated)
  - Distribution: France, Brazil, China, US

- **Terminal Assemblies**
  - Application: Electrical/Smart Meters
  - Competitive Advantage: Stamping, Contacts, Over-molding, Assembly
  - Distribution: Attleboro, Massachusetts

- **Electric Motor Shafts**
  - Application: Automotive/ Window/Seat/Wiper Motors
  - Competitive Advantage: Turning, Milling, Rolling, Grinding, Heat Treating
  - Distribution: France, Poland, Brazil

- **Terminal Assemblies**
  - Application: Electrical/Smart Meters
  - Competitive Advantage: Stamping, Contacts, Over-molding, Assembly
  - Distribution: Attleboro, Massachusetts

- **Electrical Contacts**
  - Application: Electrical (100s of various applications)
  - Competitive Advantage: Forming, Cladding, Plating, Machining, Precision Cleaning
  - Distribution: Massachusetts, China

- **Electrical Contact Assemblies**
  - Application: Electrical/ Grid and General Industrial
  - Competitive Advantage: Forming, Contact Manufacturing, Machining, Stamping, Plating, Brazing, Heat Treating, Assembly
  - Distribution: Massachusetts, China, Mexico City

- **High Voltage Connector Shields**
  - Application: Automotive/ EV Battery Connectors
  - Competitive Advantage: Stamping, Custom Tooling, Precision Cleaning
  - Distribution: Algonquin, IL, Attleboro, MA

- **Emissions Components- Diesel**
  - Application: General Industrial/Diesel After-Treatment
  - Competitive Advantage: Turning, Micro-milling, Heat Treating, Honing, EDM Drilling, Grinding, Deburr, Precision Washing
  - Distribution: Kentwood, MI

- **Electrical Reversing Switch**
  - Application: General Industrial/ Garbage Disposal
  - Competitive Advantage: Stamping, Riveting, Contact Manufacturing, Molding, Assembly
  - Distribution: Mexico City, Attleboro, MA

- **Electrical Contact Assemblies**
  - Application: Electrical/ Grid and General Industrial
  - Competitive Advantage: Forming, Contact Manufacturing, Machining, Stamping, Plating, Brazing, Heat Treating, Assembly
  - Distribution: Massachusetts, China, Mexico City

- **Steering Shafts and Pinions**
  - Application: Automotive/ Electric Power Steering
  - Competitive Advantage: Forming, Turing, Milling, Gear Hobbing, Heat Treating, Grinding
  - Distribution: Wellington, OH, Juarez, MX, France, Dowagiac, Michigan

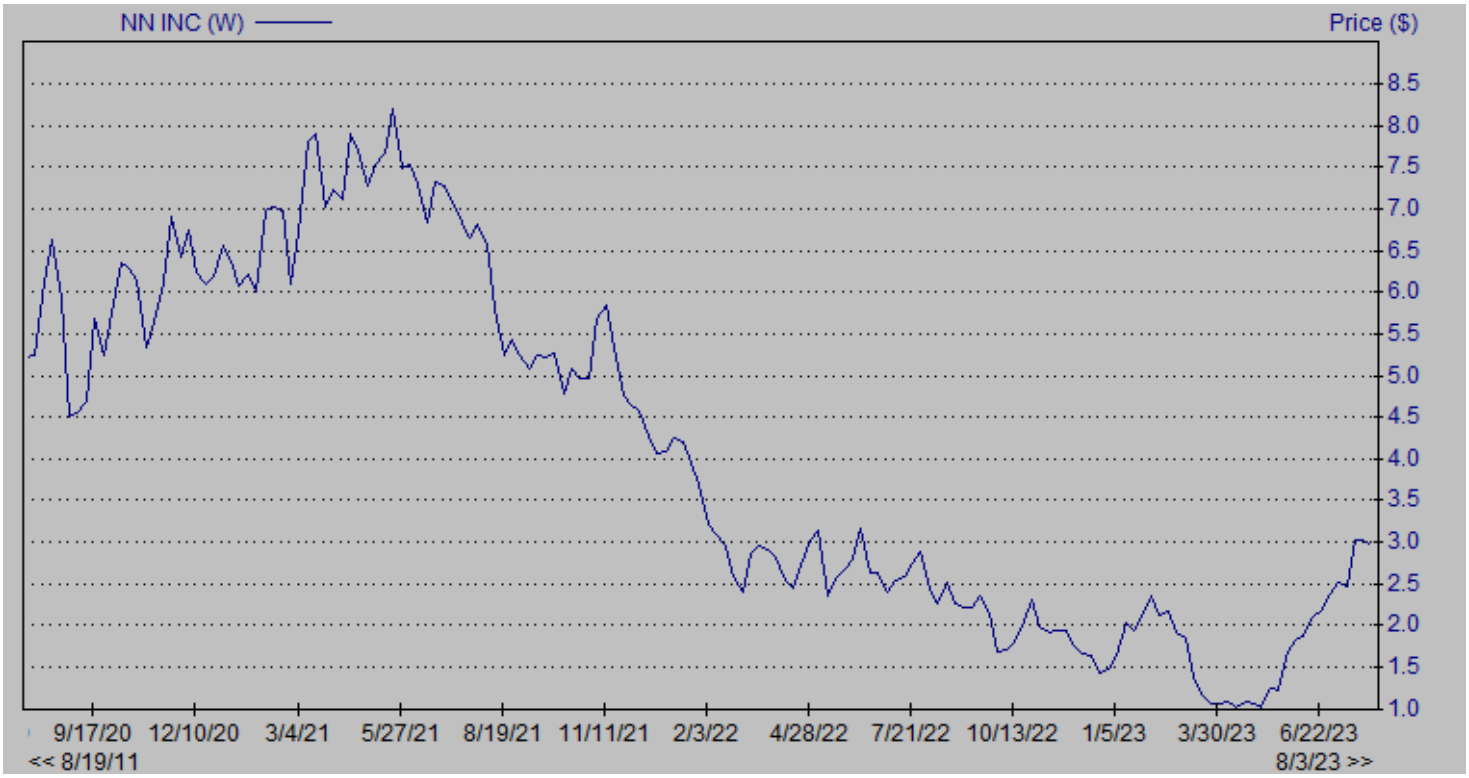
HISTORICAL STOCK PRICE



DISCLOSURES

The following disclosures relate to relationships between Zacks Small-Cap Research ("Zacks SCR"), a division of Zacks Investment Research ("ZIR"), and the issuers covered by the Zacks SCR Analysts in the Small-Cap Universe.

ANALYST DISCLOSURES

I, Tom Kerr, hereby certify that the view expressed in this research report accurately reflect my personal views about the subject securities and issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the recommendations or views expressed in this research report. I believe the information used for the creation of this report has been obtained from sources I considered to be reliable, but I can neither guarantee nor represent the completeness or accuracy of the information herewith. Such information and the opinions expressed are subject to change without notice.

INVESTMENT BANKING AND FEES FOR SERVICES

Zacks SCR does not provide investment banking services nor has it received compensation for investment banking services from the issuers of the securities covered in this report or article.
Zacks SCR has received compensation from the issuer directly, from an investment manager, or from an investor relations consulting firm engaged by the issuer for providing non-investment banking services to this issuer and expects to receive additional compensation for such non-investment banking services provided to this issuer. The non-investment banking services provided to the issuer includes the preparation of this report, investor relations services, investment software, financial database analysis, organization of non-deal road shows, and attendance fees for conferences sponsored or co-sponsored by Zacks SCR. The fees for these services vary on a per-client basis and are subject to the number and types of services contracted. Fees typically range between ten thousand and fifty thousand dollars per annum. Details of fees paid by this issuer are available upon request.

POLICY DISCLOSURES

This report provides an objective valuation of the issuer today and expected valuations of the issuer at various future dates based on applying standard investment valuation methodologies to the revenue and EPS forecasts made by the SCR Analyst of the issuer's business.
SCR Analysts are restricted from holding or trading securities in the issuers that they cover. ZIR and Zacks SCR do not make a market in any security followed by SCR nor do they act as dealers in these securities. Each Zacks SCR Analyst has full discretion over the valuation of the issuer included in this report based on his or her own due diligence. SCR Analysts are paid based on the number of companies they cover. SCR Analyst compensation is not, was not, nor will be, directly or indirectly, related to the specific valuations or views expressed in any report or article.

ADDITIONAL INFORMATION

Additional information is available upon request. Zacks SCR reports and articles are based on data obtained from sources that it believes to be reliable, but are not guaranteed to be accurate nor do they purport to be complete. Because of individual financial or investment objectives and/or financial circumstances, this report or article should not be construed as advice designed to meet the particular investment needs of any investor. Investing involves risk. Any opinions expressed by Zacks SCR Analysts are subject to change without notice. Reports or articles or tweets are not to be construed as an offer or solicitation of an offer to buy or sell the securities herein mentioned.

CANADIAN COVERAGE

This research report is a product of Zacks SCR and prepared by a research analyst who is employed by or is a consultant to Zacks SCR. The research analyst preparing the research report is resident outside of Canada, and is not an associated person of any Canadian registered adviser and/or dealer. Therefore, the analyst is not subject to supervision by a Canadian registered adviser and/or dealer, and is not required to satisfy the regulatory licensing requirements of any Canadian provincial securities regulators, the Investment Industry Regulatory Organization of Canada and is not required to otherwise comply with Canadian rules or regulations.
