

Teleflex Receives FDA Clearance for ARROW GPSCath Balloon Dilatation Catheters in Higher RBP and 80 cm Lengths

July 30, 2013

PTA Balloon Catheter combines angioplasty and targeted injection system in one device

LIMERICK, Pa.--(BUSINESS WIRE)--Jul. 30, 2013-- Teleflex Incorporated (NYSE:TFX), a leading global provider of medical devices for critical care and surgery, has announced that its subsidiary Hotspur Technologies, Inc., which Teleflex acquired in June 2012, received FDA 510(k) clearance to market the company's ARROW[®] GPSCath[®] Balloon Dilatation Catheters in Higher Rated Burst Pressure (RBP) and 80 cm lengths. These novel products enable multiple vascular procedures to be performed with one dual-function catheter, potentially reducing procedure time and expense for both patients and medical professionals.

The ARROW[®] GPSCath[®] Catheter is the first dual-functional balloon dilatation catheter that combines angioplasty and the proprietary VisioValve[™] Injection System. This innovative combination enables physicians to perform high-pressure angioplasty and inject physician-specified fluids, such as contrast, all while maintaining the guidewire position.

"We are committed to enabling medical professionals to perform peripheral access procedures with devices that both simplify and improve the doctors' and patients' experiences," said Benson Smith, Chairman, President and CEO of Teleflex. Added Smith, "There are approximately 20 million patients with peripheral vascular disease who could benefit from this multi-purpose approach to catheter design, and we are excited to bring this innovative peripheral access product to market. The ARROW[®] GPSCath[®] Balloon Dilatation Catheter with VisioValve[™] Technology is setting a higher bar for peripheral and dialysis access angioplasty performance."

About Teleflex Incorporated
