

Teleflex to Focus on Innovative Products at the Society of Critical Care Medicine's 41st Critical Care Congress

February 3, 2012

Products and education designed to help providers improve outcomes

LIMERICK, Pa., Feb 03, 2012 (BUSINESS WIRE) --Teleflex Incorporated (NYSE: TFX) will showcase a number of anesthesia, respiratory therapy and vascular access products at the Society of Critical Care Medicine's 41st Critical Care Congress February 4-8, in Houston, Texas.

Teleflex will highlight:

- **The Teleflex ISIS(R) HVT(TM)**, the first convertible endotracheal tube, features an integrated suction port and separate suction line allowing for subglottic secretion suctioning on demand. Now clinicians can be free from the burden of choosing which tube is best for the patient at the time of intubation. When needed, a separate suction line can be attached to the ISIS HVT endotracheal tube via a secure locking connection. This versatile design allows for use of one endotracheal tube to meet the needs of patients requiring both short- and long-term ventilation.
- **VasoNova(TM) Vascular Positioning System** is a central venous catheter tip location and navigation technology that allows for real-time accurate confirmation of placement of peripherally inserted central catheters and central venous catheters. The VPS System is indicated for use as an alternative method to fluoroscopy or chest x-ray for central venous catheter tip placement confirmation in adult patients when a steady blue bull's eye is obtained. NOTE: If a steady blue bull's eye is not obtained, standard hospital practice should be followed to confirm catheter tip location.
- **The Gibeck(R) Humid-Flo(R) 72-Hour Integrated Kit** provides clinicians everything they need to start passive humidification and promote best practices to help reduce the risk of ventilator-associated pneumonia (VAP). The Gibeck Humid-Flo Heat & Moisture Exchanger (HME)
 - Enables the Gibeck Humid-Flo 72-Hour Integrated Kit to remain in-line during the first 72 hours of mechanical ventilation, even when aerosol treatments are given
 - Reduces circuit breaks and allows for adherence to clinical practice guidelines¹⁻³
 - Maximizes clinical outcomes by eliminating the need to interrupt ventilation, allowing positive end-expiratory pressure (PEEP) to be maintained
- **The Arrow(R) ErgoPack(TM) System** is an ergonomic packaging system for vascular access procedures designed to efficiently facilitate compliance with best practices, evidence-based medicine, guidelines and recommendations from organizations to reduce the risk of Central Line-Associated Bloodstream Infections (CLABSI).
- **Hands-On Educational Opportunities** at the Teleflex booth (#215). SCCM congress participants can practice CVC insertion on a computer simulator and use Teleflex airway products on models to better understand their features and benefits.
