

## **Teleflex to Present at the 1st Annual Congress of the European Society for Vascular Medicine (ESVM)**

May 8, 2015

WAYNE, Pa.--(BUSINESS WIRE)--May 8, 2015-- Teleflex Incorporated (NYSE: TFX), a leading global provider of medical devices for critical care, urology and surgery, will showcase its Arrow® brand interventional radiology portfolio at the 1st Annual Congress of the European Society for Vascular Medicine (ESVM) to be held in Potsdam, Germany on May 10 - 12, 2015.

During the event, Teleflex will highlight both the Arrow® GPSCath® Balloon Dilatation Catheter featuring innovative VisioValve™ technology over a 0.014 guidewire - now for below-the-knee interventions, and the Super Arrow-Flex® Sheath Introducer.

The Arrow® GPSCath® Catheter is a specialty two-in-one device that is indicated for percutaneous transluminal angioplasty (PTA) in the peripheral vasculature, including iliac, femoral, popliteal, infrapopliteal and renal arteries allowing the physician to conduct angioplasty and inject fluid (targeted angiogram specifically at lesion site) while maintaining catheter and guidewire position. Below-the-knee interventions can be complex undertakings, requiring multiple devices, numerous procedural steps and significant procedural time. The Arrow® GPSCath® Catheter now offers a solution by combining multiple required features into one device.

The Super Arrow-Flex® Sheath Introducer gives complete vascular access, thanks to its wire-reinforced design and construction. From easy insertion and handling to the highly visible radiopaque tip, the Super Arrow-Flex® Sheath Introducer is designed to deliver optimal performance from start to finish. With a wide range of sheath sizes and lengths, the Super Arrow-Flex® Sheath Introducer gives the physician flexibility of choice for multiple vascular applications.

### **About Teleflex Incorporated**
