

Teleflex to Launch Family of Implantable Infusion Ports

January 21, 2014

LIMERICK, Pa.--(BUSINESS WIRE)--Jan. 21, 2014-- Teleflex Incorporated (NYSE: TFX), a leading global provider of medical devices for critical care and surgery, has announced FDA 510(k) clearance of a full range of Polysite[®] Implantable Ports for exclusive distribution in the U.S. under its ARROW[®] brand. These ports have a low profile, hybrid design that combines a lightweight plastic body and a strong titanium reservoir, and will be available in both pressure injectable and non-pressure injectable options.

"The ARROW[®] Polysite[®] Low Profile Hybrid Ports will further broaden a product line that demonstrates our commitment to enhance patient outcomes, improve safety and drive health economics in the area of interventional access," said Linda Beneze, President and General Manager, Specialty Division. "We are proud to add ARROW[®] Polysite[®] Ports to our portfolio."

The ARROW[®] Polysite[®] Low Profile Hybrid Ports have a lightweight body with an atraumatic profile designed to provide patient comfort, while the strong titanium reservoir is compatible with a range of cytotoxic drugs commonly used in chemotherapy and prevents needle "pitting" experienced with plastic reservoirs. The ports will be available in 6 Fr. Micro, 7 Fr. Mini, and 8 Fr. Standard sizes with attachable polyurethane catheter. All sizes are pressure injectable up to 5 mL/sec at 300psi and are MR conditional. Each ARROW[®] Polysite[®] Port Kit contains a Polyperf Safe[™] Safety Huber Needle. This patented positive pressure Huber needle has a removal system designed to reduce the risk of blood reflux and minimize catheter occlusion by maintaining positive flush pressure during one-handed needle removal.
