

## Power Integrations Extends 2006 Design Seminars to Locations in the Americas and Europe

### *Engineering Experts Reveal Best Practices for Power Supply Design*

SAN JOSE, Calif., Sept. 6, 2006 (PRIMEZONE) -- Power Integrations (Other OTC:POWI.PK), the leader in high-voltage analog integrated circuits for power conversion, today announced the continuation of its seminar series, "Designing with TinySwitch<sup>®</sup>-III and PeakSwitch<sup>™</sup> high-voltage power conversion ICs." The popular seminar series will be available to power supply designers in the Americas and Europe through November.

"Hundreds of designers in over 30 locations worldwide have attended the seminars this year and discovered how the highly integrated TinySwitch-III and PeakSwitch ICs can help simplify switching power supply designs while keeping system cost low and energy efficiency high," said Rich Fassler, director of product marketing at Power Integrations. "Extending the seminars to new locations will allow additional designers to reduce their power supply design cycles by using our ICs."

This informative seminar covers the features and operation of the newest energy-efficient power conversion ICs from PI, and offers tips on practical circuit designs, including production-worthy reference designs. It also offers a power supply design demonstration, including transformer construction detail information. Designers interested in attending can register today at: [http://www.powerint.com/seminars/design\\_seminar\\_list.htm](http://www.powerint.com/seminars/design_seminar_list.htm)

#### About Power Integrations

Power Integrations, Inc. (Other OTC:POWI.PK) is the leading supplier of high-voltage analog integrated circuits used in power conversion. The company's breakthrough integrated-circuit technology enables compact, energy-efficient power supplies in a wide range of electronic products, in both AC-DC and DC-DC applications. The company's EcoSmart<sup>®</sup>\* energy-efficiency technology, which dramatically reduces energy waste, has saved consumers and businesses around the world more than an estimated \$1.7 billion on their electricity bills since its introduction in 1998. For more information, visit the company's website at <http://www.powerint.com>.
