

Diebold Nixdorf Presents New Reverse Vending Products And Solutions For A Perfect Shopping Experience At Euroshop 2017

March 2, 2017

DÜSSELDORF, Germany-- Diebold Nixdorf is unveiling a new generation of reverse vending systems at [EuroShop 2017](#), March 5-9 in Düsseldorf, Germany. The new systems feature innovative 360-degree recognition technology for greater speed and security, plus a compact design to save space and costs.

For grocery stores, reverse vending machines are generally the consumer's first touch point with the company and the starting point of the shopping experience. As with all touchpoints, consumers expect systems to be appealing and user-friendly while retailers expect modular, space-saving systems that offer fast and safe acceptance while lowering operating costs via reduce maintenance requirements.

The new Revendo 9040, has been equipped with the innovative 360° EasyClean input unit, which recognizes the barcode and logo as soon as the container is inserted and thus enables much faster bottle acceptance. Additionally, the new system considerably reduces maintenance needs by ensuring that virtually no residual liquid drips from the containers onto the recognition unit.

To ensure a superior consumer experience, the system features a high-quality user interface, a modern design and a touch display with interactive user guidance to complement its fast, secure container returns. It also offers retailers a plethora of options for addressing consumers and ensuring consumer loyalty. For example, the terminal can be integrated in the retailer's bonus program and even allow customers to load vouchers or bonus points directly onto their smart phones via a near field communication (NFC) function.

Diebold Nixdorf will also show EuroShop visitors its new reverse vending systems Revendo 9030 and Revendo 9030S – compact standalone systems with a footprint of one or two euro pallets that are likewise based on the EasyClean concept. A compact 'S' system has also been added to the Revendo 9010 series to round off Diebold Nixdorf's product portfolio in this market segment with a reliable and attractive entry-level model.

"We have already received excellent feedback on this system from our customers, particularly when combined with our new compacting technology WCUplus, which is capable of increasing the compacting rate for PET containers by more than 50 percent compared with the market standard," explains Erik Trumpp, head of Diebold Nixdorf's product line reverse vending.

In terms of background technology, Diebold Nixdorf is showcasing Line Module: This latest generation of the company's flexible solution modules transports, sorts, compacts and collects containers on an area of little more than five square feet. Line Module is nearly completely scalable, meaning that further modules can be added to suit the volume of empties even at a later date. The module's complete interior paneling makes for easy cleaning – a process simplified even further by use of a single one-touch button that makes training almost unnecessary.
