Tekmira Pharmaceuticals (TKMR-NASDAQ)

TKMR: On track to advance TKM-PLK1 and TKM-Ebola, Strong balance sheet--Outperform

Current Recommendation	**Outperform**
Prior Recommendation	N/A
Date of Last Change	03/11/2013
Current Price (05/13/13)	$4.87
Twelve- Month Target Price	**$12.00**

OUTLOOK

Tekmira is a development stage biotech company. We are optimistic about the great potential of the Company's LNP delivery technology, which enables the systemic delivery of RNAi drug candidates. Tekmira has built a diversified pipeline which targets multiple indications including cancer and infection. Lead drug candidate TKM-PLK1 will enter into a Phase II clinical trial in 2013. Government sponsored TKM-Ebola is under accelerated "Animal Rule" development. Partnerships should build shareholder value in a rapid and cost-effective way.

We continue to rate the Company's shares Outperform.

WHAT'S NEW

Balance Sheet Continues To Be Strong

On May 14, 2013, Tekmira reported financial results for the first quarter ended March 31, 2013.

Revenue was $2.2 million for 1Q2013 as compared to $3.6 million for 1Q2012. Under a DoD contract to develop TKM-Ebola, Tekmira is being reimbursed for costs incurred, including an allocation of overheads, and is being paid an incentive fee. For this contract, Tekmira recorded $2.0 million in revenue in Q1 2013 as compared to $3.5 million in Q1 2012.

Research, development, collaborations and contracts expenses were $4.2 million in 1Q2013 as compared to $4.1 million in 1Q2012.

General and administrative expenses were $0.9 million in 1Q2013 as compared to $1.8 million in 1Q2012. 1Q2012 general and administrative expenses were higher as they included legal fees incurred in respect of a lawsuit against Alnylam and AlCana that was settled in November 2012.

For 1Q2013, net loss was $2.6 million ($0.18 per common share) as compared to a net loss of $3.2 million ($0.25 per common share) for 1Q2012.

Tekmira exited first quarter of 2013 with a strong balance sheet. As of March 31, 2013, the Company had cash and cash equivalents of $43.8 million. According to our long term model, current funds on hand, plus expected income, including payments from current licensees, collaborative partners and the DoD will be sufficient to continue product development into 2015. Tekmira expects to have an aggregate balance of cash and cash equivalents and short-term investments of greater than $35.0 million at the end of 2013.

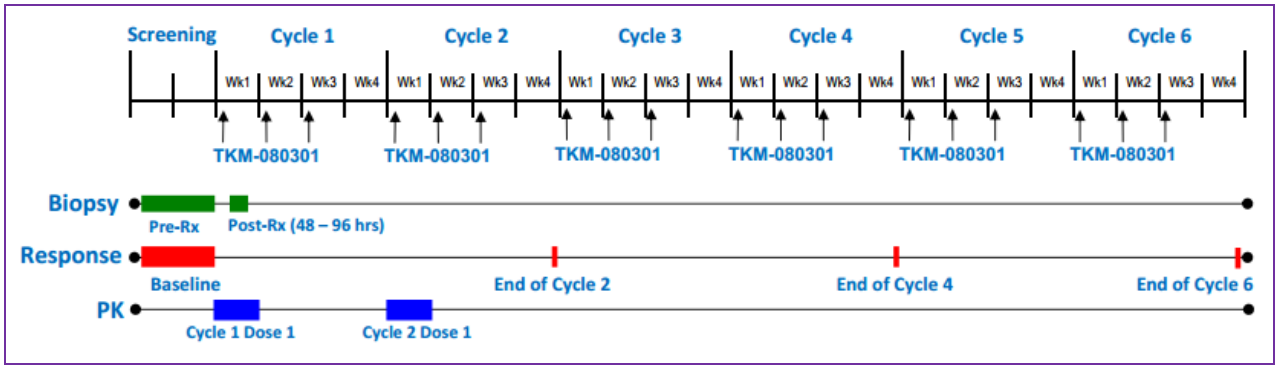

Phase I Data of TKM-PLK1 Are Encouraging

On April 9, 2013, Tekmira Pharmaceuticals (TKMR) announced the results of its **Phase I** clinical trial with **TKM-PLK1** at the annual meeting of the American Association for Cancer Research **(AACR)** in an oral presentation entitled "A phase I dose escalation study of TKM-080301, a RNAi therapeutic directed against PLK1, in patients with **advanced solid tumors**."

As a reminder, TKM-PLK1 is Tekmira's lead internal product candidate, which employs Tekmira's **lipid nanoparticle (LNP) delivery technology**, and targets PLK1 (polo-like kinase 1), a protein involved in tumor cell proliferation and a validated oncology target. Tekmira initiated the Phase I clinical trial of TKM-PLK1 in December, 2010. The Phase I clinical trial is an open label, multi-dose, dose escalation study with

- Primary Objectives: to evaluate safety, tolerability and determine maximum tolerated dose (MTD);
- Secondary Objectives: to evaluate pharmacokinetics and anti-tumor activity;
- Exploratory Objectives: to evaluate pharmacodynamic measures including RNAi effects in pre- and post-dose biopsy samples;

In this Phase I trial, TKM-PLK1 was administered to 24 patients at doses ranging from 0.15 mg/kg to 0.90 mg/kg. Patients were dosed on a weekly protocol with each four week cycle consisting of three once weekly doses followed by a rest week. A total of 152 doses were administered with a mean number of 6.3 doses per patient (range of 1-31 doses). Patients had a mean of 5.1 prior treatment regimens (range of 1-14). Treatment may continue until disease progression.

Below are the highlights of the Phase I results:

- TKM-PLK1 was generally well-tolerated. The most common grade 1-2 adverse events were rigors (33%) and fever (25%). No dose-dependent changes in liver function tests were observed. Dose-limiting toxicities included: one grade 3 transient thrombocytopenia in one patient (at 0.9 mg/kg) and one grade 3 hypoxia/dyspnea in another patient (at 0.9 mg/kg).

Toxicity (N=24)	%[a]	Grade **1 & 2**	Grade **3 & 4**[b]
Rigors	33%	8	-
Fever	25%	6	-
Fatigue	17%	4	-
Altered Taste	17%	4	-
Headache	13%	3	-
Infusion Reaction	13%	2	1
Nausea	13%	3	-
Vomiting	8%	2	-
Diarrhea	8%	2	-

- Based on these data, the MTD is estimated to be 0.75 mg/kg. A 10-patient **expansion cohort** is currently enrolling patients at 0.75 mg/kg, with 5 subjects treated and data expected later this year.

- Of 9 patients evaluable for response, treated at a dose equal to or greater than 0.6 mg/kg, 4 (44%) showed clinical benefit. In particular, one patient with progressive, metastatic appendiceal carcinoid (neuroendocrine, NET) cancer had a durable partial tumor response based on RECIST criteria, continuing for more than 10 months. Three other patients achieved stable disease, including one patient with metastatic appendiceal carcinoid cancer, another patient with metastatic colorectal cancer, and a third patient with metastatic adrenocortical carcinoma.

	Doses < 0.6 mg/kg	Doses ≥ 0.6 mg/kg
# Treated	8	16
# Treated beyond Cycle 1	4	10
# Evaluable for Response	3	9
# with Clinical Benefit	0	4

- 4 of 9 (44%) evaluable subjects treated at ≥ 0.60 mg/kg had clinical benefit

Subject	Dose	Tumor Type	# Prior Regimens	Best Response	Duration on Study
003-13	0.60	Colon	3	SD	6 mo.
003-20	0.90/0.60	NET	1	PR	11 mo.
003-24	0.75	NET	1	SD	4 mo.
002-25	0.75	ACC	3	SD	5.5 mo. (ongoing)

- Pharmacokinetic data showed that Cmax (peak serum concentration of drug) and area under the curve (AUC) were dose proportional, without evidence of drug accumulation, and that the pharmacokinetic profile of TKM-PLK1 is maintained through multiple cycles.

- Importantly, the data confirm that the drug exposure levels achieved in this trial, incorporating Tekmira's second generation LNP formulation specifically designed to facilitate siRNA delivery to disseminated disease sites, are several fold greater than were achieved in clinical trials using earlier LNP formulations.

- RNAi effect was confirmed in biopsy samples.

We think the Phase I data of TKM-PLK1 are encouraging though it was a small trial. We are pleased to see that TKM-PLK1 was generally well-tolerated and has shown some anti-tumor activity. We are especially impressed by the 44% evaluable patients who showed clinical benefit.

Phase II Trial of TKM-PLK1 is Planned in 2H13

Based on the Phase I data, Tekmira plans to initiate a **Phase II** clinical trial of TKM-PLK1 in patients with previously treated gastrointestinal **carcinoid (neuroendocrine) cancer** in 2H2013.

The rationale for neuroendocrine cancer is that although a variety of tumor types were treated in this Phase I study including colorectal, neuroendocrine, cholangiocarcinoma, adrenocortical, breast, ovarian, mesothelioma, lung, and unspecified adenocarcinoma, neuroendocrine cancer patients had the best response. Of the two patients enrolled with gastrointestinal carcinoid (neuroendocrine) cancer, both responded to treatment with TKM-PLK1 with one partial response and on in stable disease.

The Company is currently working on the design of the Phase II trial. Details of the trial design will be disclosed later this year. Tekmira is also evaluating additional indications for Phase II development and will provide guidance later this year.

Neuroendocrine tumors (NETs) arise from a variety of anatomic sites and share the capacity for production of hormones and vasoactive peptides. Because of their perceived rarity, NETs have not historically been a focus of rigorous clinical research. However, the diagnosed incidence of NETs has been increasing, and the estimated prevalence in the United States exceeds 100,000 individuals. According to the Carcinoid Cancer Foundation, it is estimated that more than 12,000 new cases of carcinoid/NETs are diagnosed each year, and at least 115,000 people are living with carcinoid/NETs in the United States. Metastatic gastrointestinal carcinoid (neuroendocrine) tumors often have a poor prognosis and may have an aggressive clinical course.

Currently, treatment options for patients with neuroendocrine tumors are limited. Tekmira’s TKM-PLK1 has the potential to become a standard of care for NET patients if successful.

Tekmira is on Track to Advance TKM-Ebola Program

On May 8, 2013, Tekmira announced that its contract with the U.S. Department of Defense (DoD) has been modified to support development plans that integrate advancements in Tekmira's lipid nanoparticle (LNP) formulation and manufacturing technologies, and provide for additional funding for the TKM-Ebola program.

Ebola is a virus, which, for many years, has been associated with periodic outbreaks of **hemorrhagic fever** in human populations with mortality rates reaching 90%. Currently there are no approved treatments for Ebola or other hemorrhagic fever viruses.

TKM-Ebola is an anti-Ebola viral therapeutic, being developed under a contract with the U.S. DoD's Joint Project Manager Transformational Medical Technologies (JPM-TMT) Office with a total contract value of approximately $140 million.

The Development History of TKM-Ebola

In May 2010, Tekmira published a series of **preclinical studies** demonstrating the ability of an RNAi therapeutic utilizing its LNP technology to protect non-human primates from Ebola virus. Tekmira conducted the studies in collaboration with infectious disease researchers from Boston University and the United States Army Medical Research Institute for Infectious Diseases (USAMRIID) and were funded in part by the U.S. Government's Transformational Medical Technologies (TMT) program.

These preclinical studies demonstrated that when siRNA targeting the Ebola virus and delivered by Tekmira's LNP technology were used to treat previously infected non-human primates, the result was 100 percent protection from an otherwise lethal dose of Zaire Ebola virus.

On July 14, 2010, Tekmira signed a contract with the **United States Department of Defense (DoD)** to advance an RNAi therapeutic utilizing the Company's LNP technology to treat Ebola virus infection. In the initial phase of the contract, Tekmira is eligible to **receive up to US$34.8 million**. This initial funding is for the development of **TKM-Ebola**, including completion of preclinical development, filing an IND application with the FDA and the completion of a Phase I human safety clinical trial. The United States DoD has the option of extending the contract beyond the initial funding period to support the advancement of TKM-Ebola through to the completion of clinical development and FDA approval. Based on the budget for the extended contract this would provide the Company with a total of up to US$140.0 million in funding for the entire program.

In November 2011, an Investigational New Drug (IND) application for TKM-Ebola was approved by the FDA. In February 2012, Tekmira initiated the TKM-Ebola **Phase I** clinical trial, which is a placebo-controlled, single-blind, single-ascending dose study with additional multiple-ascending dose cohorts in healthy human volunteers. The objective of the Phase I trial is to assess the safety and tolerability of TKM-Ebola and evaluate the pharmacokinetics and systemic exposure following both a single-ascending dose and multiple-ascending doses of TKM-Ebola.

On August 6, 2012, Tekmira received a temporary stop-work order from the United States DoD with respect to the TKM-Ebola program. On October 2, 2012, Tekmira disclosed that the temporary stop-work order was lifted by the United States DoD and work will continue on development of the TKM-Ebola product.

During the course of the development of TKM-Ebola, the LNP technology has been significantly improved. Therefore, Tekmira has submitted a modification request to the existing contract to the United States DoD in order to integrate recent advancements in LNP formulation and manufacturing technology, including lyophilization, in the TKM-Ebola development program. The program will utilize an **LNP formulation that is more than 10-fold** more potent than previous formulations and more potent than all other LNP formulations currently being evaluated in clinical trials.

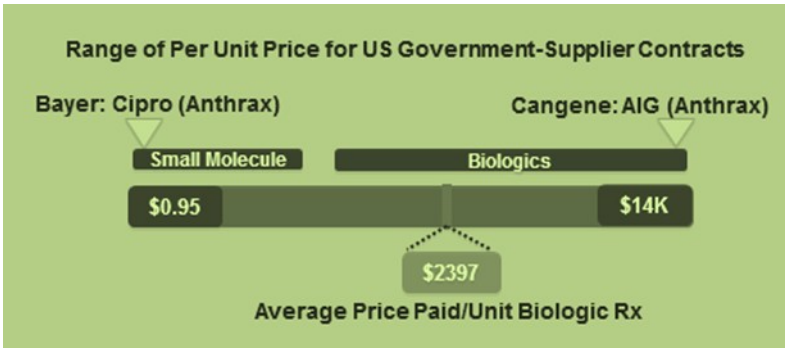

Under the **modification to the existing contract**, funding has been increased by $6.9 million, from $34.8 million to $41.7 million for the first phase of the contract.

Tekmira has initiated **pre-clinical** and chemistry, manufacturing and control studies that support the use of these improvements in the program. This development strategy will be accommodated by modifications to the existing contract, allowing both Tekmira and TMT to benefit from the significant advancements in LNP formulation technology made by Tekmira since the commencement of the TMT-funded program in July 2010. It is expected that the LNP formulation work will be completed and submitted to the FDA **in the second half of 2013** in order to initiate a **new Phase I** clinical trial.

TKM-Ebola, Accelerated Program Could Provide Significant Near-Term Cash Flow

TKM-Ebola is being developed under specific FDA regulatory guidelines called the "**Animal Rule**." The Animal Rule provides that under certain circumstances, where it is unethical or not feasible to conduct human efficacy studies, the FDA may grant marketing approval based on adequate and well-controlled animal studies when the results of those studies establish that the drug is reasonably likely to produce clinical benefit in humans. Demonstration of the product's safety in humans is still required.

We think the "Animal Rule" means a lot for Tekmira, because this can accelerate the development of TKM-Ebola. Once approved by the FDA, Tekmira will have the opportunity to negotiate a stock-pile contract with the US government. These stock-pile or procurement contracts have been very lucrative for other companies supplying similar drugs to the US government.

Update on Partners' Products

Tekmira has granted a license to Alnylam Pharmaceuticals, Inc. to use Tekmira's LNP technology to enable RNAi therapeutic products. Tekmira will receive milestone and royalty payments as these LNP-enabled products are developed and commercialized.

ALN-TTR02

Alnylam has guided that initial results from a Phase II clinical trial with ALN-TTR02 -- an RNAi therapeutic for the treatment of ATTR that is enabled by Tekmira's LNP technology -- are anticipated to be reported in mid-2013. Tekmira is entitled to receive a $5 million milestone payment when ALN-TTR02 enters a pivotal or Phase III clinical trial, which Alnylam has guided should occur by the end of 2013. Tekmira is eligible to receive royalty payments based on commercial sales of ALN-TTR.

ALN-VSP

ALN-VSP, which is a systemically delivered RNAi therapeutic for the treatment of advanced solid tumors with liver involvement, is enabled by Tekmira's LNP technology. Complete results from the ALN-VSP Phase I clinical trial and extension study were published in January 2013 in the journal Cancer Discovery. ALN-VSP is partnered with Ascletis Pharmaceuticals (Hangzhou) Co., Ltd., a privately held U.S.-China joint venture pharmaceutical company, for further advancement in the Chinese market. Tekmira is entitled to receive a US$5 million milestone payment for enabling ALN-VSP to enter a clinical trial in China, which is expected to occur in 2013. Tekmira is eligible to receive royalty payments based on commercial sales of ALN-VSP.

ALN-PCS02

ALN-PCS02, which is an RNAi therapeutic to treat hypercholesterolemia is enabled by Tekmira's LNP technology. In February 2013, Alnylam disclosed an exclusive global alliance with The Medicines

Company to advance the ALN-PCS program. Tekmira is eligible to receive royalty payments based on commercial sales of ALN-PCS02.

Marqibo

Marqibo, which is a liposomal formulation of the chemotherapy drug vincristine -- along with two other liposomal chemotherapy products, Alocrest and Brakiva -- were licensed from Tekmira to Talon Therapeutics, Inc. in 2006. Talon is responsible for all future development of these products. On August 9, 2012, Tekmira disclosed that Talon received accelerated approval from the FDA for Marqibo(R) (vinCRIStine sulfate LIPOSOME injection) for the treatment of adult patients with Philadelphia chromosome negative (Ph-) acute lymphoblastic leukemia (ALL) in second or greater relapse or whose disease has progressed following two or more anti-leukemia therapies. Tekmira is eligible to receive royalty payments based on Marqibo's commercial sales.

INVESTMENT HIGHLIGHTS

- We maintain our Outperform rating for Tekmira Pharmaceuticals **(TKMR)** and reiterate our twelve-month price target of $12 per share.

- Tekmira is one of the pioneers and leaders in the field of RNAi therapeutics. We are optimistic about the Company's lipid nanoparticle **(LNP) RNAi delivery technology**, which enables systemic delivery of RNAi drug candidates. RNAi is one of the most promising targeted therapies, but is challenged by its systemic delivery and distribution into diseased areas in humans. Tekmira's LNP platform technology has great potential to achieve this goal.

- Tekmira's pipeline **targets multiple indications** including cancer, infection, alcohol dependence and other indications which hold great market potential. The Company has advanced its lead cancer drug candidate TKM-PLK1 into a Phase I clinical trial using its LNP delivery technology. A Phase II study is expected to begin in 2H13.

- The Company's **TKM-Ebola** is sponsored by US government under the FDA accelerated "Animal Rule" development plan which has the potential to shorten the development timeline greatly. Phase I safety trial will be initiated within 12 months. TKM-Ebola could provide significant cash flow to the Company in the number of years as the product is developed under a $140 million US government contract.

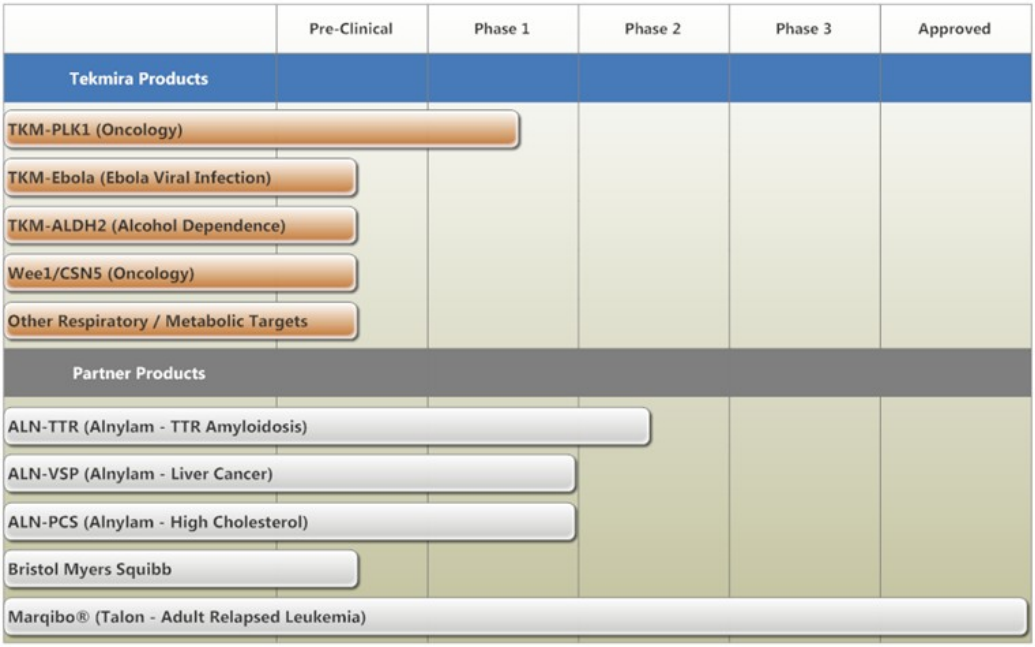

- Two other candidates **TKM-ALDH2** and **Wee1/CSN5** targets alcohol dependence and oncology respectively. Tekmira is conducting preclinical work to further evaluate these earlier stage programs and could bring them into the clinic soon.

- **Partnerships** are integral part of Tekmira's growth strategy. The Company has established partnerships with the US government and biotech/pharmaceutical companies to utilize its LNP technology to advance RNAi therapeutics. Major partners include Merck, BMS, Alnylam, and Talon. These partnerships not only provide non-dilutive funding for the Company, but also validate the Company's LNP technology and management's commitment to advancing RNAi therapeutics.

- Significant **clinical advances** enabled by Tekmira's LNP technology have been made in partner Alnylam's pipeline. Alnylam has already reported Phase I data of ALN-TTR02 and will report Phase II data this year and plans to initiate a Phase III trial in late 2013. Alnylam has also reported positive Phase I data from ALN-VSP and ALN-PCS. All these data further validate the LNP technology.

- Tekmira has a very **strong balance sheet**. The Company's current cash balance should run into 2015. With a strong balance sheet, Tekmira will be focused on its long term growth strategy without the need for near term financing. Future license fees, milestone payments and royalties from Marqibo can provide further non-dilutive funding.

- We think Tekmira's shares are **undervalued** based on the Company's strong fundamentals. We encourage investors to accumulate Tekmira shares at the current market price.

VALUATION AND RECOMMENDATION

We maintain our **Outperform rating** on Tekmira shares and reiterate our 12-month price target of **$12.00** per share. Our call is based on the Company's strong fundamentals.

Tekmira is one of the pioneers and leaders in the field of RNAi therapeutics. The discovery of RNAi is a revolution in biology, representing a breakthrough in understanding how genes are turned on and off in cells, and a completely new approach to drug discovery and development. RNAi has the potential to generate a broad new class of therapeutic drugs.

We are especially optimistic about the Company's **LNP delivery platform technology**, which has proven to have the power to systemically deliver RNA drug candidates to a variety of organs and cells throughout the body.

Based on the LNP platform, Tekmira has built a diversified pipeline, which targets cancer and other indications. Its lead drug candidate TKM-PLK1 for cancers is completing a Phase I clinical trial and preliminary data has shown promising efficacy and favorable safety profile. A Phase II study will be initiated in 2H13.

Tekmira has also established a strong partnership with the US government and biotech/pharmaceutical companies to utilize its LNP technology to advance RNAi therapeutics. These partnerships not only provide non-dilutive financing, but also validate the technology and diversify the Company's risk.

The government sponsored TKM-Ebola program is being developed under specific FDA "**Animal Rule**", which means that the development for TKM-Ebola could be accelerated since no human clinical trial for efficacy is required. Three partnered programs at Alnylam have completed Phase I trials and ALN-TTR is in a Phase II clinical trial and is expected to enter a pivotal trial in 2013.

Our call also considers the Company's strong balance sheet. The settlement with Alnylam provided a $65 million up-front payment to Tekmira in 2012 and another $10 million milestone payment is anticipated for 2013. Tekmira's cash balance should last into 2015 according to our long term financial model. This is compelling for a small cap biotech company. The Company will also receive royalty payments from Marqibo sales which we expect will start in 2013. Further, Tekmira will continue to monetize its LNP platform technology and receive license fees and milestone payments from its partners. With the Alnylam settlement completed, Tekmira is well positioned to execute its long term growth strategy.

Based on our analysis, we think Tekmira shares are undervalued at this time. Currently, shares of Tekmira are trading at around $5.00 per share, which values the Company at a $70 million market cap. We admit that it's always difficult to value a development stage biotech company; Tekmira is no exception. However, we do think that current market value of Tekmira is a huge discount compared to its peers in the same industry.

Most small biotech companies of development stage are valued from $50 million to $500 million depending on how advanced the pipeline is and which indications the company is targeting. Tekmira's TKM-PLK1 for cancer will enter a Phase II clinical study this year, and the Company's TKM-Ebola product is being developed under the accelerated FDA "Animal Rule". TKM-PLK1 has the potential for the treatment of multiple cancers providing a large market opportunity. In the next year or so, Tekmira may advance additional programs into the clinic.

Name	Ticker	Share Price	Market Cap ($million)	Phase I	Phase II	Phase III	Marketed Products
Isis	ISIS	$20.24	$2,100.00	5	15	2	1
Alnylam	ALNY	$27.99	$1,740.00	4	3	0	0
Regulus	RGLS	$7.27	$260.87	0	0	0	0
Arrowhead	ARWR	$2.26	$70.75	2	1	0	0
Sarepta	SRPT	$35.12	$1,120.00	3	1	0	0
RXi	RXII	$0.20	$62.88	1	0	0	0
Bio-Path	BPTH	$0.53	$32.98	1	0	0	0
Tekmira	**TKMR**	**$4.89**	**$70.80**	**3**	**2**	**0**	**0**
Average		**$12.31**	**$682.29**				

We think at this time Tekmira should be valued between $150 and $400 million in market cap. If we look at the table of RNA based biotech companies, we think Tekmira should be worth more than Regulus. Our price target of $12 values Tekmira at $168 million in market cap which we think is conservative. Investors with high risk tolerance may consider Tekmira as a component of their portfolio.

Development Risk is still High for RNAi Therapeutics

Although RNAi is one of the most promising targeted therapies, there have been no RNAi drugs approved by the FDA.

Even though Tekmira's LNP technology has the potential to provide the solution to the systemic delivery of RNAi therapeutics, data collected so far are limited, and only come from pre-clinical and Phase I trials.

We remind investors that risks associated with drug development and related delivery technologies are high, especially for early stage of drug candidates.

The Company's most advanced drug candidate TKM-PLK1 is only in a Phase I clinical trial. Both clinical and regulatory hurdles are significant at this point. However, investors should closely watch the Alnylam programs which are more advanced and will be providing additional data over the coming quarters.

HISTORICAL ZACKS RECOMMENDATIONS

DISCLOSURES

The following disclosures relate to relationships between Zacks Investment Research ("ZIR") and Zacks Small-Cap Research ("Zacks SCR") and the issuers covered by the Zacks SCR analysts in the Small-Cap Universe.

ZIR or Zacks SCR Analysts do not hold or trade securities in the issuers which they cover. Each analyst has full discretion on the rating and price target based on their own due diligence. Analysts are paid in part based on the overall profitability of Zacks SCR. Such profitability is derived from a variety of sources and includes payments received from issuers of securities covered by Zacks SCR for non-investment banking services. No part of analyst compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in any report or blog.

ZIR and Zacks SCR do not make a market in any security nor do they act as dealers in securities. Zacks SCR has never received compensation for investment banking services on the small-cap universe. Zacks SCR does not expect received compensation for investment banking services on the small-cap universe. Zacks SCR has received compensation for non-investment banking services on the small-cap universe, and expects to receive additional compensation for non-investment banking services on the small-cap universe, paid by issuers of securities covered by Zacks SCR. Non-investment banking services include investor relations services and software, financial database analysis, advertising services, brokerage services, advisory services, investment research, and investment management.

Additional information is available upon request. Zacks SCR reports are based on data obtained from sources we believe to be reliable, but is not guaranteed as to accuracy and does not purport to be complete. Because of individual objectives, the report should not be construed as advice designed to meet the particular investment needs of any investor. Any opinions expressed by Zacks SCR Analysts are subject to change. Reports are not to be construed as an offer or the solicitation of an offer to buy or sell the securities herein mentioned. Zacks SCR uses the following rating system for the securities it covers. Buy/Outperform: The analyst expects that the subject company will outperform the broader U.S. equity market over the next one to two quarters. Hold/Neutral: The analyst expects that the company will perform in line with the broader U.S. equity market over the next one to two quarters. Sell/Underperform: The analyst expects the company will underperform the broader U.S. Equity market over the next one to two quarters.

The current distribution of Zacks Ratings is as follows on the 1004 companies covered: Buy/Outperform- 15.2%, Hold/Neutral- 77.6%, Sell/Underperform – 6.7%. Data is as of midnight on the business day immediately prior to this publication.
