Silicom Limited (SILC-NASDAQ)

Silicom is Worth $50 After a Record Quarter :OUTPERFORM

Current Recommendation	**Outperform**
Prior Recommendation	N/A
Date of Last Change	09/09/2010
Current Price (10/22/13)	$41.41
Target Price	**$50.00**

OUTLOOK

Silicom engages in the design, manufacture, marketing, and support of connectivity solutions for a range of servers and server based systems. The firm has several growth engines including Information Technology's return to growth, the march to 10GB per second technology, a large and growing base of OEM customers includes most of the market-leading players, staged launch of new products, and a strong OEM business model which limits operating expenses. SETAC, the firms newly patented Server to Appliance Converter, which combines the best of standard servers with hardware appliances should allow the firm to push its revenues to the $100 million level in coming years. We see value in the shares of Silicom.

WHATS NEW

Record Quarter

On October 21, 2013, Silicom Ltd, the provider of high-performance server and appliances networking solutions, reported financial results for its third quarter and nine months, ended September 30, 2013.

The company's solid momentum continued with outstanding growth over the last year of approximately 50 percent, leading to record third quarter revenues, operating income, net income and earnings per share. Revenues for the third quarter jumped year over year by $5.678 million or just over 49 percent to $17.200 million, which compares to revenues of $11.522 million for the three months ended September 30, 2012. Sequentially, revenues increased nearly 10 percent from $15.715 million from the second quarter of 2013. The jump in revenues was a diversified across all product lines, particularly the newer ones. Silicom sold product across its broad base of 90-plus design wins customers with initial sales to the new customers while continuing to ramp sales to existing customers in all target markets.

Metric	Q3 Performance	Breakdown	Takeaway
Revenue	$17.2 million from $11.5 million in the third quarter of 2012.	Approximately 50% growth over past 4 prior year quarters.	Strength across all segments and products.
Operating Income, Net Income & EPS	Non-GAAP Net Income $4.2 million, or $0.58 per diluted share, a 55% increase compared with $2.7 million, or $0.39 for the third quarter of 2012.	Record high in Net Income and EPS.	Operating income for the third quarter of 2013 was $4.2 million or 24.4% of revenues.
Design Wins	Three significant design wins: One for SETAC modules, two from a new Traffic Management and Policy Enforcement customer, one for an Intelligent BYPASS Switch (IBS) and the other for an internal bypass blade.	SETAC win is a long-time Silicom customer, that will ramp their business to about $4 million per year.	Further upside is a possibility as this customer is considering using SILC solutions for additional products.
Balance Sheet / Cash Flow	Net cash stands at $50.2 million.	$7.06 per share in net cash.	As of September 30, 2013, inventory increased to $31.6 million compared with $26.8 million in the second quarter.
Management Outlook	Management sees a strong fourth quarter.	Time Stamp Sales will ramp over time.	No specific guidance, but management sees further strength.

Operating income for the quarter increased year over year by over 52 percent to a record $4.072 million, which compares to $2.678 million for the comparable quarter of 2012. Sequentially, operating income improved over 17 percent from $3.479 million for the quarter ended June 30, 2013.

Although total operating expenses increased year over year by $616,000, they fell to 17.1 percent of revenues from 20.2 percent of revenues during the third quarter of 2012. Operating expenses as a percent of revenues also fell sequentially from 18.3 percent of revenues for the quarter ended June 30,

2013. Operating expenses are growing at a much lower rate than revenues which demonstrates the strong inherent operating leverage and ongoing strength of Silicom's business model.

Gross margin for the three months ended June 30, 2013, fell to 40.8 percent compared to 43.5 percent for the third quarter, ended September 30, 2012. However, gross margin improved sequentially from 40.1 percent for the three months ended June 30, 2013. Gross margin varies between quarters mainly as a result of the specific mix of products sold during the quarter.

On a GAAP basis, the company's third quarter net income increased year over year by nearly 56 percent or $1.439 million to a record $4.020 million from net income of $2.581 million for the comparable quarter of 2012. Sequentially, GAAP net income improved by $731,000 from $3.289 million for the quarter ended June 30, 2013.

Based on a weighted average number of diluted shares of 7.276 million shares, diluted net income per share resulted in net income of $0.55 during the third quarter of fiscal 2013. This compared to a diluted net income per share of $0.37 on a weighted average number of diluted shares of 7.020 million shares during the three months ended September 30, 2012 and $0.45 per diluted share for the second quarter 2013.

On a non-GAAP basis, the company reported third quarter net income of $4.193 million or $0.58 per diluted share. This compares to non-GAAP net income of $2.705 million or $0.39 per diluted share for the quarter ended September 30, 2012 and $3.456 million or $0.48 per diluted share for the quarter ended June 30, 2013.

Based on expectations of continued growth in sales, which in turn is based on the order or forecasted potential upside from many of the company's customers, management made the decision to build a higher inventory level during the second and the third quarters. As of September 30, 2013, the company's inventory increased to $31.6 million compared with $26.8 million at the end of the previous quarter. Here again, this increase in inventory reflects the strong growth in Silicom's business.

For the period ended September 30, 2013, Silicom's total cash, cash equivalents, bank deposits and marketable securities totaled $50.2 million or $7.06 per outstanding share, which compares to $52.7 million or $7.41 per outstanding share as of June 30, 2013. The assets provides Silicom with a substantial level of working capital and financial flexibility, placing it in a position of strength and stability, enabling the company to continue to invest in its business as well as take advantage of opportunities as they arise, whether externally or internally.

Additionally, with Software Defined Networking (SDN), Network Functions Virtualization (NFV), virtualization and cloud computing concepts all being fueled by the rise of Big Data, Silicom leveraged its positioning in these fast-growing markets by recently acquiring unique virtualization offload engine intellectual property from Net Perform Technology. This purchase secures the company's exclusive access to this technology, and should significantly increase Silicom's total addressable market as well as make a strong positive contribution to revenues and profits over the long term.

The company's continually growing customer roster contains huge additional sales potential. As Silicom moves forward with this customer growth, it leads to more product lines and types of products from customer's other lines, continually increasing Silicom's offering of new products.

Silicom Does it Again with a New Product

SETAC, the firms newly patented Server to Appliance Converter, which combines the best of standard servers with hardware appliances has been gaining acceptance in the past three years and is driving revenues and the stock price.

On February 19, 2013 the firm announced that it has launched a new family of Intelligent Nano-Second Time-Stamping (NICS), a breakthrough enabler of next-generation network monitoring in Big Data environments, and that it has already secured an immediate Design Win for the product line's first adapter. The firm will be recording its first Time Stamp revenues shortly, and projects a rapid sales ramp-up to reach annual revenues of $15 to $20 million within a few years.

Use

In today's faster and more inter-connected networks, time-stamps at the packet level are prerequisites for effective analysis of network performance-related issues such as latency and jitter, as well as critical enablers of e-trading, digital forensics and other time-sensitive applications.

Dividend Policy and Financial Flexibility

In mid-January 2013, the Company's Board of Directors adopted a policy for distributing dividends, subject to all applicable laws, where each year Silicom will distribute a dividend of up to 50% of its annual distributable profits.

It should further be noted that this was Silicom's highest ever cash level which demonstrates to both its existing customers as well as new potential customers that the Company can meet all their needs and provide them with support over the long term.

Furthermore, the improvement of assets provides the Company with a substantial level of working capital and financial flexibility, placing Silicom in a position of strength and stability, enabling the Company to continue to invest in its business as well as take advantage of opportunities as they arise.

Management feels more confident than ever about its ability to continue its growth over the short and long term and believes that the Company is ideally positioned to continue its progress in step with its fast-growth target markets.

With strong demand for all of the Company's product line, exciting strategic wins with some of the industry's most important players and an extensive pipeline of potential sales, management believes that Silicom has never been better positioned and remains very optimistic with regard to the Company's future potential.

Growth Environment

The industry's fundamentals remain strong as a result of continued acceleration of worldwide growth of the internet and data traffic and the corresponding desire for bandwidth. All these add up to a dramatic increase in the rate in which data is generated, stored, processed and provided with a corresponding drive for increased capacity and bandwidth. Given that Silicom's products are core and critical building blocks for these next generation servers and appliances, the Company continues to see strong demand.

With the Company being sought out by the market's top server and appliance manufacturers, as a result of its reputation for out-of-the-box technologies, rapid response time and world-class service, Silicom is receiving a steady stream of new opportunities, design wins and ongoing orders.

In particular, Silicom's SETAC product family, which achieved four design wins in the third quarter, continues to gain ever increasing market traction which is leading to a worthy cycle of increasing customer acceptance of this technology.

Silicom's cost competitive SETAC (Server To Appliance Converter) product family, offers a distinctive growth opportunity that enables the Company to offer a full network appliance platform solution. This new product line permits Silicom to address new market segments as well as obtain nearly unlimited potential with the its existing customer base.

These recent SETAC design wins will further accelerate the momentum that has been building for Silicom's SETAC product family, further boosting its importance as a significant driver for the Company's sales and profits.

Furthermore, it is important to note that while SETAC was primarily accepted in the security market segment in the past, it recently has been moving into the acceleration optimization market, which is very important to the Company.

During the third quarter, Silicom achieved a design win with a Chinese networking giant and already has initial purchase orders for multiport adaptors in place. The short term forecast of revenues for this win are for a run rate of approximately $1 million per year with the potential for the annual purchase orders of several times this amount. This strategic win positions Silicom to benefit significantly from the rapid growth in China.

With China's population of over 1.3 billion and its quick uptick in smart phones, there is an enormous escalating demand for cloud services, mobility and big data networks. As such, China has become a huge opportunity for all the major networking equipment manufacturing and therefore for Silicom, as a strategic supplier to many of these companies. As a result management feels very optimistic about China as a growth driver for Company sales for years to come.

Along the same lines, it is also important to note that as the Company's customer base continues to grow and diversify, the Company's pool of design wins expands, which brings Silicom a growing platform of recurring orders as well as a broader range of new opportunities, often from different divisions within a large corporation.

As a result of these trends, management feels more confident than ever about its ability to continue its growth over the short and long term and believes that the Company is ideally positioned to continue its progress in step with its fast-growth target markets.

With strong demand for all of the Company's product line, exciting strategic wins with some of the industry's most important players, productive discussions in process, and an extensive pipeline of potential sales, management believes that Silicom has never been better positioned and remains very optimistic with regard to the Company's future potential.

Silicom's Promising Growth Drivers
The strong trends in rising internet traffic, cloud computing and virtualization that are developing within the information technology market offer Silicom several unique opportunities to dramatically increase revenues.

These external developments strongly escalate Silicom's customer's network appliances needs for WAN optimization, internet security and application delivery.

While total global monthly internet traffic is expected to be 4x greater in 2015 than it was in 2010, the Company estimates that the WAN optimization, internet security and application delivery markets are growing at an average of 20 percent per year.

These solid external growth engines combined with internal growth engines such as the Company's increasing sales of SETAC and SETAC based network appliance products, as well as the staged launch of additional new products, has the potential to push the Company's revenues to a $100 million per year run rate in the long-term

What's more, the SETAC (Server To Appliance Converter) product family, not only permits Silicom to address new market segments, but also allows the Company to obtain nearly unlimited potential with its existing customer base of 75 OEM businesses that include market leaders within target segments.

Along the same lines, the growth in demand from existing and new customers has led to new design wins during the past twelve months that are expected to ramp up gradually, generating approximately $6.5-$9.0 million in new revenue per year.

INVESTMENT THESIS

- The OEM business model provides leverage.
- The firm offers the widest selection of server adapters in terms of speed, ports and chip sets.
- 10 GB Ethernet is replacing 1 GB as the backbone network and has just begun to migrate down to high-end server systems.
- SILC's SETAC combines the best of both Standard Server and Hardware Appliance.
- With $7.06 per share in cash, the firm's balance sheet is a source of strength.
- Silicom appears to have entered a new growth phase which may push revenues to the $50 million mark.

Silicom Ltd. engages in the design, manufacture, marketing, and support of connectivity solutions for a range of servers and server based systems in North America, Europe, and internationally. It primarily offers server networking cards with and without bypass (server adapters). The company's server adapters are used in various applications, such as security appliances, wide area network optimization appliances, load balancing and traffic management appliances, network-attached storage, video on demand servers, content delivery

servers, Internet service providers/Web hosting, and computing. It also offers a range of intelligent and programmable cards, such as encryption acceleration cards and redirector cards; and intelligent stand alone bypass units. The company markets most of its products through original equipment manufacturers, and sometimes through distributors, and resellers.

A History

In late 2002 Silicom began exploring a new direction which has become its primary growth driver and will continue being the main source of growth in the next few years: high-end server networking cards. The firm's core expertise has always been a broad range of Ethernet and connectivity products, which provided personal computer users with solutions to their connectivity problems. In late 2002, the firm decided to employ its core know-how in the realm of server-based systems. SILC is now able to take advantage of its competitive edge by using the expertise it developed in connectivity solutions for personal computers in industries which require broader connectivity solutions with very high-performance environments. Examples of these industries are security, WAN optimization, load balancing and other network appliances, data storage, video on demand, internet content delivery, high-performance computing and web servers.

Widest Selection

SILC has developed a line of products for the server networking industry which facilitates interaction between servers, allowing them to communicate with each other through a larger number of ports and with higher performance than their original capabilities. These are powerful products that allow server-based systems to fully exploit the high speed potential of Gigabit Ethernet. The products have either one, two, four or six ports, which plug into the servers between which interaction is facilitated.

Markets Served	Leaders
WAN Optimization Appliances	Riverbed, Blue Coat, Cisco, Citrix, Silver Peak
Security Appliances	Checkpoint, Cisco, Juniper, Trend Micro, McAfee
Load Balancing Appliances	F5, Radware
Storage	EMC, Network Appliance
Telecom	Alcatel-Lucent
General Purpose Servers	Dell, HP, Intel, IBM, Fujitsu

Gigabit Ethernet is a term describing various technologies for transmitting Ethernet frames at a rate of a gigabit per second. Higher bandwidth 10 gigabit Ethernet standards have since become available as the IEEE ratified a fiber-based standard in 2002, and a twisted pair standard in 2006. As of 2009 10Gb Ethernet is replacing 1Gb as the backbone network and has just begun to migrate down to high-end server systems. The accelerating growth of worldwide network traffic is forcing service providers, enterprise network managers and architects to look to ever higher-speed network technologies in order to solve the bandwidth demand crunch. Today, these administrators typically use Ethernet as their backbone technology. Although networks face many different issues, 10 Gigabit Ethernet meets several key criteria for efficient and effective high-speed networks:

The firms products cover a broader scope of features than those of it competitors. SILC's belief that its expanded feature set coupled with the fact that its products are based on two different industry leader chip sets (Intel and Broadcom), which makes them more compatible with potential customers' needs, gives the firm a competitive edge. Silicom is currently the only company offering such a comprehensive range of server networking products.

A Backdrop of Growth

Market research firm IDC feels that while downside macroeconomic risks are still present, we entered 2011 on the back of a resounding rebound for the technology industry. The overall IT market will grow by 7 percent

this year, as per the IDC report, to $1.65 trillion with another year of double-digit growth for hardware spending (10 percent), while the software and services markets will increase by 5 percent and 4 percent, respectively. Another research firm Forrester believes businesses will spend 7.1% more on IT than they did last year, when IT spending growth rose 7.2% from 2009. According to Forrester companies are expected to spend $1.69 trillion in IT products and services this year.

Growth Drivers

Internal Growth Drivers	External Growth Drivers
Growing revenues to existing clients	IT Market's Return to growth
improve offering within existing product line	Continued Evolution to new computing (Nehalem)
SETAC based sales growth	Migration to 10GBPS from 1GBPS

OEM Business Model

The firm utilizes an OEM model for approximately 95% of its sales. This creates significant operating leverage through reduced sales and marketing expenses and gives the firm insight into new technologies. OEM partnerships enhance visibility and market reputation and approximately 70 of the firms that SILC works with are market leaders. Once selected by a customer Silicom has never been replaced by competitors.

Smart Adapters

The firm's High Performance Multi Protocol Server Adapters are adapter in which one Server Adapter addresses networking, storage, HPC and virtualization. These intelligent programmable adapters improve performance by redirecting traffic based on packet characteristics, thereby offloading the server.

SETAC, The best of both worlds

SETAC, which is Silicon's newly patented, product family converts standard servers to network appliances and is designed for systems that require front I/O ports, I/O ports replaceable without opening the system chassis, high quantity of I/O ports and flexibility to provide high quantity of different configurations.

When network appliance providers design their network appliances, they can either use a general server or a specific appliance oriented hardware solution. The server with standard add-on adapters assures server-grade reliability and a stable state of the art technological environment but sacrifices flexibility. On the other hand using specific appliance- oriented hardware solutions allows for superior flexibility and field-re-configurability but lacks in server grade reliability and technological stability.

SETAC offers the benefits of these two options, enabling branded high technology servers to be configured as hardware appliances, and creating an ideal network appliance that combines server grade reliability, front-end access, field- replaceable architecture and a stable state-of-the-art technology environment.

STANDARD SERVER

Pro	Con
Server grade reliability	Server look and feel
State of the Art technology	inconvenient back connectivity
Lower cost/unit	not modular- cant reconfigure

HARDWARE APPLIANCE

Pro	Con
easy to reconfigure	no server grade reliability
appliance look and feel	higher cost
reliable networking modules integration	time to market lag with each new generation

SETAC Moves into the Spotlight

On August 16, 2010 SILC announced that SETAC has been selected by one of the security industry's dominant players for use in next-generation lines of security appliances to be launched in early 2011. Silicom estimates that sales related to the deal will ramp up over the next year generating revenues of over $3 million in its first production year.

On March 15, 2010 the firm announced that MaxStar, a leading Chinese manufacturer of network appliances, had chosen Silicom's SETAC as the basis for its new product line for medium-to-high-end customers. Using the SETAC, MaxStar will offer its customers unique network appliances that combine front-loading modular networking capabilities in a specialized chassis with the robust reliability of a standard motherboard. This combination fits the demands of network application providers in China, a vast, sophisticated and rapidly-growing market.

On January 26th 2011 the firm announced that a Tier 1 server manufacturer will begin offering appliances which integrate Silicom's SETAC Server To Appliance Converter with one of the popular models of its standard servers. Shaike Orbach, Silicom's President and CEO feels that, "From an exposure point of view, **the SETAC will be moving into the spotlight,** benefiting from the marketing efforts and recommendations of the manufacturer's OEM Group and its customization partner."

In May 2011 SILC announced it achieved two important Design Wins for Networking Modules which is part of the Company's SETAC Server-to-Appliance Converter strategy. SETAC was selected by one of its major customers that is a dominant player in the global security industry as well as a leading company in the Traffic Management and Policy Enforcement industry. Silicom estimates that sales to the two customers will total approximately $3 million per year.

Valuation

I feel Silicom should be valued by its cash plus business operations. With cash and liquid assets of $7.06 per share, plus the company's business operations value based on 17.2x our 2014 EPS estimate, this gives us a $50.00 company value. According to Zacks.com the average P/E in the peer group is 21.6x. Certainly the stock should trade at a premium given the growth and balance sheet position.

Looking at it another way, I see the SETAC and NICS technology driving the company's growth over the next several years. The discounted free cash flow to the firm model accounts for two periods of growth. One in which the firm outgrows the industry, and another in which the company's products mature and their growth looks more like the economy. We assume the top-line grows at 17.5% for ten years and then levels off at 4% per year. In year five of our model revenues pass the $100 million mark. This may actually prove conservative as revenues have grown much faster than that over the past 10 years. I was also conservative when projecting future discount rates, Net Income Margin, and tax rates.

Assumptions

1. The company is expected to grow at a higher growth rate in the first period.

2. The growth rate will drop at the end of the first period to the stable growth rate.

Rationale for using the Model

As new products are introduced to new customers, we expect the company to grow at a higher overall rate than the industry. As these products mature and the company faces more competition, we expect the growth rate to level off.

Weakness of the Model

As you add more layers to the model, it is more sensitive to the assumptions you make. The growth may look more "lumpy" than we have in the model.

Output

I used the following inputs:

1. A 10-year period with a growth rate of 17.5% (average forecast) and a discount rate of 12.96%.

2. A continuing period assumed to go on forever, with earnings growing at 4% and a discount rate of 10.21%.

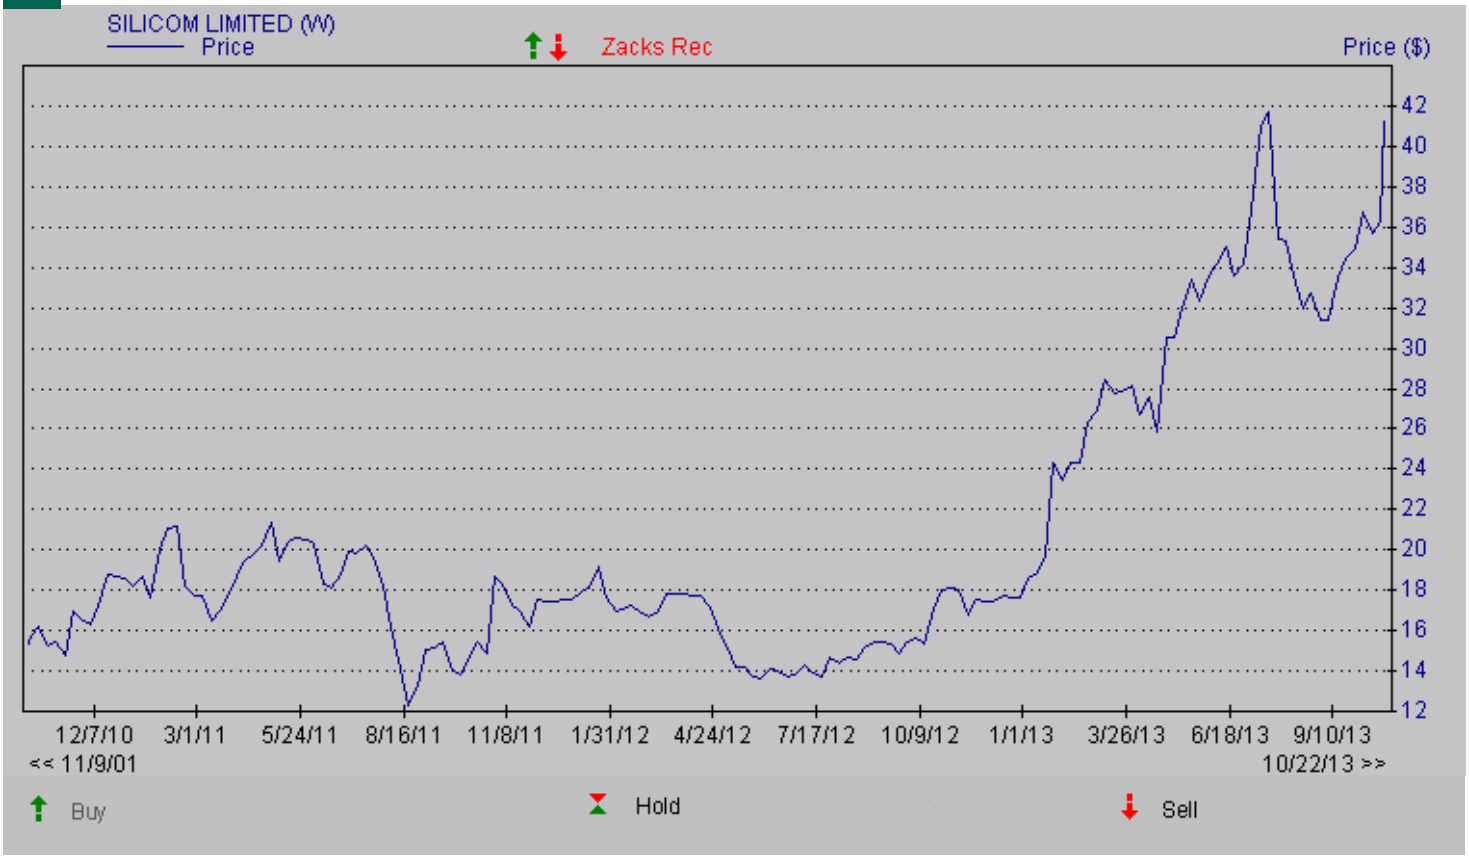

With these inputs we arrive at a target price of $50.00.

HISTORICAL ZACKS RECOMMENDATIONS

DISCLOSURES

The following disclosures relate to relationships between Zacks Investment Research ("ZIR"), Zacks & Company (ZCO") and Zacks Small-Cap Research ("Zacks SCR") and the issuers covered by the Zacks SCR analysts in the Small-Cap Universe.

ZIR or Zacks SCR Analysts do not hold or trade securities in the issuers which they cover. Each analyst has full discretion on the rating and price target based on their own due diligence. Analysts are paid in part based on the overall profitability of Zacks SCR. Such profitability is derived from a variety of sources and includes payments received from issuers of securities covered by Zacks SCR for non-investment banking services. No part of analyst compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in any report or blog.

ZIR and Zacks SCR do not make a market in any security nor do they act as dealers in securities. Zacks SCR has never received compensation for investment banking services on the small-cap universe. Zacks SCR does not expect received compensation for investment banking services on the small-cap universe. Zacks SCR has received compensation for non-investment banking services on the small-cap universe, and expects to receive additional compensation for non-investment banking services on the small-cap universe, paid by issuers of securities covered by Zacks SCR. Non-investment banking services include investor relations services and software, financial database analysis, advertising services, brokerage services, advisory services, investment research, and investment management.

Additional information is available upon request. Zacks SCR reports are based on data obtained from sources we believe to be reliable, but is not guaranteed as to accuracy and does not purport to be complete. Because of individual objectives, the report should not be construed as advice designed to meet the particular investment needs of any investor. Any opinions expressed by Zacks SCR Analysts are subject to change. Reports are not to be construed as an offer or the solicitation of an offer to buy or sell the securities herein mentioned.

ZCO and Zacks SCR are separate legal entities. ZCO is U.S. broker-dealer registered with the U.S. Securities and Exchange Commission and a member of the Financial Industry Regulatory Authority and the Securities Investor Protection Corp. This report is for your information only and is not an offer to sell, or a solicitation of an offer to buy, the securities or instruments through ZCO.

Zacks SCR uses the following rating system for the securities it covers. Buy/Outperform: The analyst expects that the subject company will outperform the broader U.S. equity market over the next one to two quarters. Hold/Neutral: The analyst expects that the company will perform in line with the broader U.S. equity market over the next one to two quarters. Sell/Underperform: The analyst expects the company will underperform the broader U.S. Equity market over the next one to two quarters.

The current distribution of Zacks Ratings is as follows on the 1032 companies covered: Buy/Outperform- 15.1%, Hold/Neutral- 78.5%, Sell/Underperform – 5.8%. Data is as of midnight on the business day immediately prior to this publication.
