Silicom Limited (SILC-NASDAQ)

SILC: Zacks Company Report - OUTPERFORM

Current Recommendation	**Outperform**
Prior Recommendation	N/A
Date of Last Change	09/09/2010
Current Price (10/25/10)	$15.46
Six- Month Target Price	**$20.00**

OUTLOOK

Silicom engages in the design, manufacture, marketing, and support of connectivity solutions for a range of servers and server based systems. The firm has several growth engines including Information Technology's return to growth, the march to 10GB per second technology, large and growing base of OEM customers includes most of the market-leading players, staged launch of new products, and a strong OEM business model which limits operating expenses. SETAC, the firms new Server to Appliance Converter, which combines the best of standard servers with hardware appliances should allow the firm to push its revenues to the 100 million run rate level in coming years. We see value in the shares of Silicom.

SUMMARY DATA

WHAT'S NEW

On October 25th 2010 SILC announced results for the third quarter of fiscal year 2010 ending September 2010. Revenue for the period was $7.4 million rising 10.4% sequentially from $6.7 million and up 60.8% year over year.

Operating income for the quarter was $1.6 million, which equates to an operating margin of 21%, a five-fold increase compared with $333,000 in the third quarter of 2009, and an 11% increase compared with the second quarter of 2010. Net income for the quarter was $1.4 million, or $0.21 per share (basic and diluted), up 316% compared with $346,000, or $0.05 per share (basic and diluted), for the third quarter of 2009. In the second quarter of 2010 net income for the quarter was $1.4 million or $0.20 per share (basic and diluted),

Design Wins Piling Up

The firm announced three major wins that illustrate its growing momentum. In co-operation with a Fortune-100 industry giant, SILC achieved a breakthrough with SETAC Server-To-Appliance-Converter product line, selling SETAC-based solutions to a Tier-1 security leader in a deal that will generate $3 million for the firm in its first production year. Further SILC announced two important wins with the established networking server adapter product line: one with a data center-class WAN Optimization leader, and the other with a Japanese server manufacturer, an existing customer that has introduced the firm to another of its divisions.

As of September 30, 2010, the Company's cash, cash equivalents, bank deposits and marketable securities totaled $44.9 million, or $6.60 per outstanding share. This is up $1.0 million compared with the end of the second quarter of 2010.

INVESTMENT THESIS

- The OEM business model provides leverage.
- The firm offers the widest selection of server adapters in terms of speed, ports and chip sets.
- 10 GB Ethernet is replacing 1 GB as the backbone network and has just begun to migrate down to high-end server systems.
- SILC's SETAC combines the best of both Standard Server and Hardware Appliance.
- With $6.44 per share in cash, the firm's balance sheet is a source of strength.
- Silicom appears to have entered a new growth phase which may push revenues to the $100 million mark.

OVERVIEW

Silicom Ltd. engages in the design, manufacture, marketing, and support of connectivity solutions for a range of servers and server based systems in North America, Europe, and internationally. It primarily offers server networking cards with and without bypass (server adapters). The company's server adapters are used in various applications, such as security appliances, wide area network optimization appliances, load balancing and traffic management appliances, network-attached storage, video on demand servers, content delivery servers, Internet service providers/Web hosting, and computing. It also offers a range of intelligent and programmable cards, such as encryption acceleration cards and redirector cards; and intelligent stand alone bypass units. The company markets most of its products through original equipment manufacturers, and sometimes through distributors, and resellers.

A history

In late 2002 Silicom began exploring a new direction which has become its primary growth driver and will continue being the main source of growth in the next few years: high-end server networking cards. The firm's core expertise has always been a broad range of Ethernet and connectivity products, which provided personal computer users with solutions to their connectivity problems. In late 2002, the firm decided to employ its core know-how in the realm of server-based systems. SILC is now able to take advantage of its competitive edge by using the expertise it developed in connectivity solutions for personal computers in industries which require broader connectivity solutions with very high-performance environments. Examples of these industries are security, WAN optimization, load balancing and other network appliances, data storage, video on demand, internet content delivery, high-performance computing and web servers.

Widest Selection

SILC has developed a line of products for the server networking industry which facilitates interaction between servers, allowing them to communicate with each other through a larger number of ports and with higher performance than their original capabilities. These are powerful products that allow server-based systems to fully exploit the high speed potential of Gigabit Ethernet. The products have either one, two, four or six ports, which plug into the servers between which interaction is facilitated.

Markets Served	Leaders
WAN Optimization Appliances	Riverbed, Blue Coat, Cisco, Citrix, Silver Peak
Security Appliances	Checkpoint, Cisco, Juniper, Trend Micro, McAfee
Load Balancing Appliances	F5, Radware
Storage	EMC, Network Appliance
Telecom	Alcatel-Lucent
General Purpose Servers	Dell, HP, Intel, IBM, Fujitsu

Gigabit Ethernet is a term describing various technologies for transmitting Ethernet frames at a rate of a gigabit per second. Higher bandwidth 10 gigabit Ethernet standards have since become available as the IEEE ratified a fiber-based standard in 2002, and a twisted pair standard in 2006. As of 2009 10Gb Ethernet is replacing 1Gb as the backbone network and has just begun to migrate down to high-end server systems. The accelerating growth of worldwide network traffic is forcing service providers, enterprise network managers and architects to look to ever higher-speed network technologies in order to solve the bandwidth demand crunch. Today, these administrators typically use Ethernet as their backbone technology. Although networks face many different issues, 10 Gigabit Ethernet meets several key criteria for efficient and effective high-speed networks:

The firms products cover a broader scope of features than those of it competitors. SILC's belief that its expanded feature set coupled with the fact that its products are based on two different industry leader chip sets (Intel and Broadcom), which makes them more compatible with potential customers' needs, gives the firm a competitive edge. Silicom is currently the only company offering such a comprehensive range of server networking products.

A Backdrop of Growth

According to the market research firm Gartner, global spending on IT products and services is forecast to total US$3.3 trillion in 2010, up almost 4% from 2009, but down from the 5.3% originally forecast by Gartner earlier this year. Worldwide computing hardware spending is forecast to reach US$365bn in 2010, up 9.1% from 2009 spending. Drilling down further the computing hardware sector continues to benefit from a healthy PC sector, which accounts for two-thirds of total spending in this area, and Gartner expect PC shipments to remain robust throughout 2010 and 2011. "Consumer shipments will continue to be powered by strong mobile PC uptake, while professional shipments will be buoyed by a new replacement cycle and migration to Windows 7.

Growth Drivers

Internal Growth Drivers	External Growth Drivers
Growing revenues to existing clients	IT Market's Return to growth
improve offering within existing product line	Continued Evolution to new computing (Nehalem)
SETAC based sales growth	Migration to 10GBPS from 1GBPS

OEM Business Model

The firm utilizes an OEM model for approximately 95% of its sales. This creates significant operating leverage through reduced sales and marketing expenses and gives the firm insight into new technologies. OEM partnerships enhance visibility and market reputation and approximately 70 of the firms that SILC works with are market leaders. Once selected by a customer Silicom has never been replaced by competitors.

Smart Adapters
The firm's High Performance Multi Protocol Server Adapters are adapter in which one Server Adapter addresses networking, storage, HPC and virtualization. These intelligent programmable adapters improve performance by redirecting traffic based on packet characteristics, thereby offloading the server.

SETAC, The best of both worlds
SETAC, which is Silicon's new patent pending, product family converts standard servers to network appliances and is designed for systems that require front I/O ports, I/O ports replaceable without opening the system chassis, high quantity of I/O ports and flexibility to provide high quantity of different configurations.

When network appliance providers design their network appliances, they can either use a general server or a specific appliance oriented hardware solution. The server with standard add-on adapters assures server-grade reliability and a stable state of the art technological environment but sacrifices flexibility. On the other hand using specific appliance- oriented hardware solutions allows for superior flexibility and field-re-configurability but lacks in server grade reliability and technological stability.

SETAC offers the benefits of these two options, enabling branded high technology servers to be configured as hardware appliances, and creating an ideal network appliance that combines server grade reliability, front-end access, field- replaceable architecture and a stable state-of-the-art technology environment.

Pro	Con
Server grade reliability	Server look and feel
State of the Art technology	inconvenient back connectivity
Lower cost/unit	not modular- cant reconfigure

Pro	Con
easy to reconfigure	no server grade reliability
appliance look and feel	higher cost
reliable networking modules integration	time to market lag with each new generation

Early Success
On August 16th, 2010 SILC announced that SETAC has been selected by one of the security industry's dominant players for use in next-generation lines of security appliances to be launched in early 2011. Silicom estimates that sales related to the deal will ramp up over the next year generating revenues of over $3 million in its first production year.

On March 15th the firm announced that MaxStar, a leading Chinese manufacturer of network appliances, had chosen Silicom's SETAC as the basis for its new product line for medium-to-high-end customers. Using the SETAC, MaxStar will offer its customers unique network appliances that combine front-loading modular networking capabilities in a specialized chassis with the robust reliability of a standard motherboard. This combination fits the demands of network application providers in China, a vast, sophisticated and rapidly-growing market.

Strong Balance Sheet
The firm's balance sheet is a source of strength. As of September 30, 2010, the Company's cash and marketable securities totaled $44.9 million, or $6.80 per outstanding share. Silicom has had twenty three straight quarters of profitability and has been cash flow positive since 2005. This included $3.4 million in 2009 despite weak market conditions.

VALUATION

SILC seems primed to enter a new growth phase. The growth engine in the short term is three fold. The first is the growth of Server Adapters in security markets and optimization, the next growth engine is new customers as well as new product lines every quarter. The strength of the OEM business model is evident in that SILC can roll out new business and keep operating expenses in check. Lastly the evolution of 10GB server adapters should provide growth in the short term. SETAC, which enables branded high technology servers to be configured as hardware appliances, Should push Silicom's revenues to a $100 million per year run rate.

	Price Change YTD	P/E (TTM)	P/S (TTM)	P/ Bk Val	EV/ EBITDA
Industry Comparables					
SILC	**55.20%**	**25.5**	**4.11**	**1.96**	**17.2**
RVBD	103.40%	256.7	7.76	8.34	72.19
FTNT	41.83%	37.54	6.44	10.2	38
MLNX	1.96%	35.68	4.73	2.57	13.59
ELX	-6.83	36.24	2.12	1.42	10.51
DGII	8.55%	33.28	1.45	1.08	9.92

Silicom should outperform given the IT market's bottomless need for faster response times and increased bandwidth against the backdrop of cloud computing, virtualization, and Internet-based applications.

We believe Silicom should be valued by its cash plus business operations. With the cash and liquid assets of $6.80 per share plus the company's business operations value based on 12.0x our 2011 estimate gives us a $20.00 company value**.**

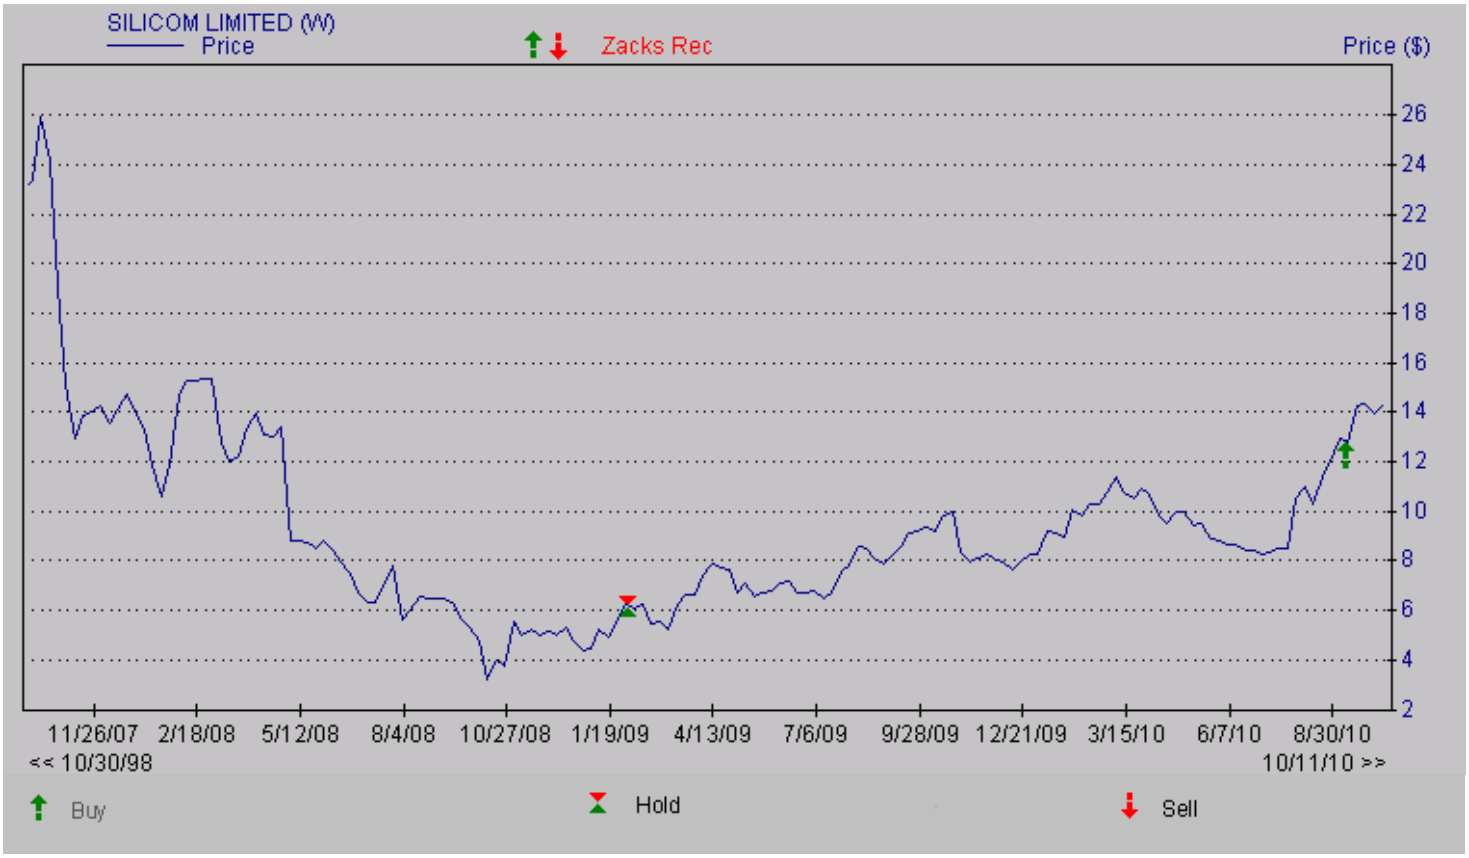

Looking at it another way we value the company based on the average of our P/E multiple (12.0x 2011 estimated EPS) and our two stage intrinsic model. The networking and communication device group average P/E is between 14x-26x. We feel SILC should trade at a premium to its peers, given the fact that the company has high growth/ high margin products.

The intrinsic value is essentially a sum of the company's future earnings, minus any long-term debt (Zero in SILC's case). Dividing the intrinsic value by the number of shares outstanding yields an intrinsic stock price. We used the following inputs:

- A 10-year period with an earnings growth rate of 20.0% and a discount rate of 15%.
- A continuing period assumed to go on forever, with earnings growing at 6% and a discount rate of 12%.

With these inputs we arrive at a target price of **$20.00.**

HISTORICAL ZACKS RECOMMENDATIONS

DISCLOSURES

The analysts contributing to this report do not hold any shares of SILC. Zacks EPS and revenue forecasts are not consensus forecasts. Additionally, the analysts contributing to this report certify that the views expressed herein accurately reflect the analysts' personal views as to the subject securities and issuers. Zacks certifies that no part of the analysts' compensation was, is, or will be, directly or indirectly, related to the specific recommendation or views expressed by the analyst in the report. Additional information on the securities mentioned in this report is available upon request. This report is based on data obtained from sources we believe to be reliable, but is not guaranteed as to accuracy and does not purport to be complete. Because of individual objectives, the report should not be construed as advice designed to meet the particular investment needs of any investor. Any opinions expressed herein are subject to change. This report is not to be construed as an offer or the solicitation of an offer to buy or sell the securities herein mentioned. Zacks or its officers, employees or customers may have a position long or short in the securities mentioned and buy or sell the securities from time to time. Zacks uses the following rating system for the securities it covers. **Outperform**- Zacks expects that the subject company will outperform the broader U.S. equity market over the next one to two quarters. **Neutral**- Zacks expects that the company will perform in line with the broader U.S. equity market over the next one to two quarters. **Underperform**- Zacks expects the company will under perform the broader U.S. Equity market over the next one to two quarters. The current distribution of Zacks Ratings is as follows on the 1008 companies covered: Outperform- 13.6%, Neutral- 80.5%, Underperform – 5.8%. Data is as of midnight on the business day immediately prior to this publication.
