KB Home has a proud history of being a leader in sustainability in the homebuilding industry and beyond. For nearly two decades, we have been building energy- and water-efficient homes and applying innovation toward a more sustainable future. While not all of our efforts have been adopted across our business long term, what remains constant year in and year out is our drive to bring fresh thinking to the design of the American home. Below is a brief chronology of our achievements over the last 20 years.

### A History of Sustainability Leadership
